PgCon 2011

May 2011...

Version 2.1 is in beta

Things done since
last year...

- Git Migration done
- New habit of publishing branches in progress
- Look for us on GitHub!

Clustertest framework

<http://www.github.com/clustertest>

Java framework

Tests written in JavaScript

- “DISORDER” OLTP tests
 - updates, queries, whilst messing with replication
 - Found bugs to stomp!

Lots of cleanup

- Doc building
- .gitignore
- Nuked SNMP
- Some Windows fixes
- Functions use named parameters
- Extra "health checks"
- application_name
GUC
- Monitoring thread added to indicate what slons are up to

Performance fix

- Subscription is way behind...
- Seq Scan → Index Scan
- PROFIT!

```
SET ADD TABLE (  
    SET ID = 1,  
    ORIGIN=1,  
TABLES='public.tabs*');
```

Implicit WAIT FOR EVENT
- slonik automatically waits
to avoid race conditions

Future...

- More sophisticated FAILOVER command needed for complex clusters
- Some esoteric bugs still O/S
- Looking for evolutionary enhancements
