

# Teaching at a University

Prof. Dr.-Ing. Carsten Bormann, Universität Bremen TZI  
Railsconf Europe 2007, Berlin DE, 2007-09-19

This public version sanitized for copyrights and privacy rights — sorry about that

If Ruby is so great,  
why are Universities  
still teaching Java?

# Who are you?

1. Who **teaches** (coaches, consults with newbies) Rails?
2. Who **works** at a University?
3. Intersection of 1 and 2 (teach && work)?
4. Who **is** at a University?
5. Intersection of 1 and 4 (teach && is)?

.class.ancestors

- ▶ I **teach** and do **research** at universities  
(Uni Bremen TZI, UdK Berlin IEB, TU Helsinki netlab)

- ▶ I occasionally

- write **books**
- do real **work**
- help create software

**netCs**

\$ screen -r

\$ toast

# Germany

- ▶ You can't earn credit points for learning a programming language at an **Universität** (that wouldn't be **science**)

- ▶ **Universitäten** (research universities)

- Science

Insert  
image of  
Einstein  
here

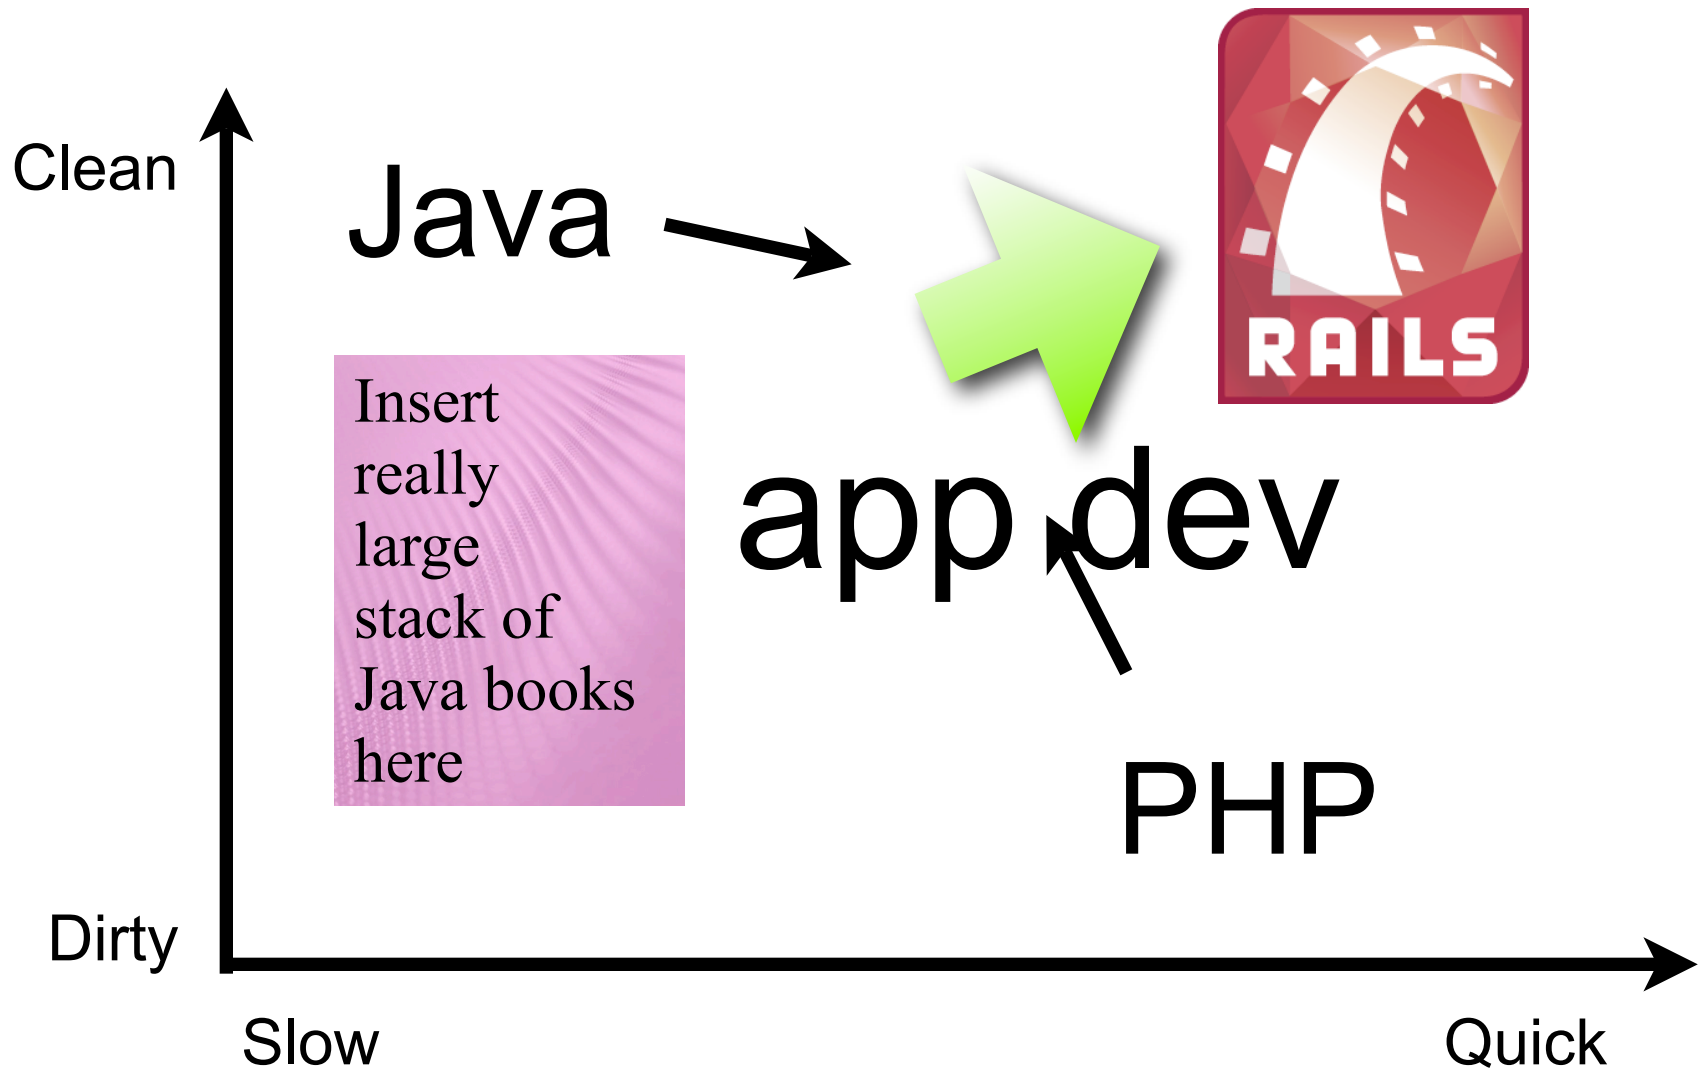

- ▶ **Fachhochschulen** (no english term)

- Skills

# How to motivate teaching Rails?

- ▶ To colleagues?
  - hard (see above)
  
- ▶ To myself?
  - I need the students
  
- ▶ To students?
  - easy (see below)

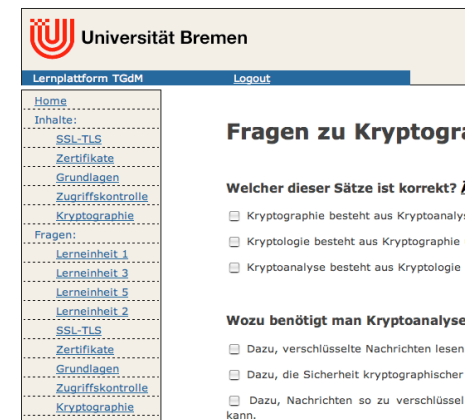

# Can't really teach "Rails", anyway

- ▶ We actually teach **web application development**
- ▶ In: (Prerequisites)
  - Basics of Internet Technologies (Net and Web)
- ▶ Out: (Objective)
  - **Agile development**
  - Web-based apps as a specific form of **fast app dev**
  - Ruby as the leading **dynamic language**

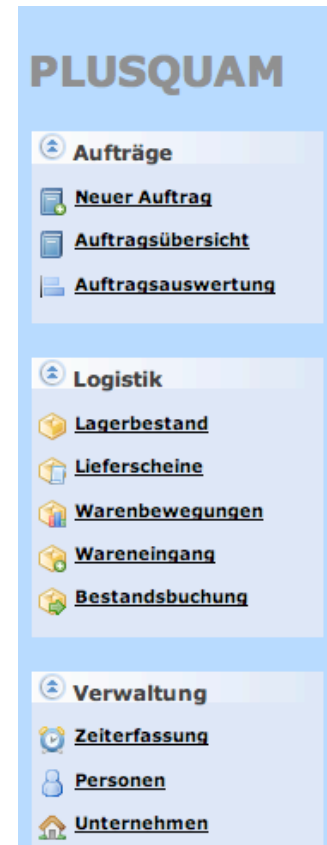

# Eat your own dogfood.

- ▶ The TZI administrative/financial database is a Rails site.
- ▶ One afternoon, we knocked off a little course management system in Rails.
- ▶ We run internal and external projects using Rails.
- ▶ We have lots of project ideas that will be enabled by Rails.

# Example for a Thesis Project

- ▶ Is it possible to get a German **SME** to contract and **pay** for an Agile Development Project?
- ▶ Are there maybe Agile Development issues specific to **Germany**?

# Google Summer of Code 2007

- ▶ Atom Publishing Protocol Support for Ruby + Rails  
by **Gerrit Kaiser**, mentored by Benjamin Joseph Bleything  
(see <http://app.rubyforge.org>)
  - released, but not completely done yet
  - to lead to a Bachelor Report by November

# Teaching at a University

Prof. Dr.-Ing. Carsten Bormann, Universität Bremen TZI

# One interesting approach

- ▶ Use Ruby/Rails to teach programming to **non-programmers**
- ▶ <http://rubylearn.com> (Charles Severance, UMich),  
<http://wonderfullyflawed.com/course/> (Trek)

## Welcome to Teaching Programming with Ruby and Rails

This is a very much under construction web site being initially built by [Dr. Charles Severance](#) to collect resources to help in teaching Ruby and Rails to beginning programming students.

The first course I am developing is **SI539 - Design of Complex Web Sites** being taught Fall 2007 at the University of Michigan. I am using this site to make my materials publically available under the Creative Commons Attribution 2.5.

# Ruby on Rails @ Uni Bremen

- ▶ Master-level course, 6 CP (ECTS)
  - but open for younger people, if they feel up to it
- ▶ „Agile Web-Entwicklung“ (**AWE**)
  - (no, not “bewegliche Netzentwicklung mit Schienen”)
- ▶ Not just Rails, but the agile dev methods, too

# How can you do agile development without **customers**?

- ▶ You can't.
- ▶ So where do you get them?
- ▶ \_\_\_\_\_
- ▶ If you want to play **customer** in a future course, please contact me at  
[cabo@tzi.org](mailto:cabo@tzi.org)

# Structure of the AWE course

- ▶ Learn **Ruby** in a no-credits pre-course
  - a couple of weeks before the Rails course
  - hard to keep up the motivation here
  
- ▶ Lock up the students in a computer room for two weeks
  - Start the day with some “lectures”
  - Let them work in pairs on projects for the rest of the day
  - Encourage communication

Insert  
image of  
freezing guy  
here

# Organization

- ▶ Assign a **customer** to each **pair**
- ▶ have a hard deadline at the end of the 12 days
- ▶ Morning: **Lectures**
- ▶ Late afternoon: **communication break**
- ▶ Rest of the time: project work (incl. customer meetings)
- ▶ The usual stuff (SVN, wiki, ...)

# The communication break

- ▶ Groups are encouraged to do peer-teaching (mutual coaching)
- ▶ 17:00–18:00 each day:
  - I **pick** a subject
  - groups (2) are **randomly** paired (4)
  - group pairs (4) are paired again (8)
- ▶ Result: 2 to 3 distilled presentations on the subject prepared in a common Wiki

# Week 1

- ▶ Get people up and running **in two days**
- ▶ Give them all to be “feature-complete” **in the first week**

|     |   |
|-----|---|
| Mon | Intro (look at what I’m not doing),<br>motivation, overview<br>Get to know Rails<br>Learn the environment |
| Tue | Migrations<br>Basic Agile Development<br>Understand the customer  |
| Wed | More about views and controllers<br>More about AR, Validation; SQL<br>Security                            |
| Thu | AJAX<br>RJS   |
| Fri | (More about TDD)<br>Lead into a weekend of work   |

## Week 2

- ▶ Three more days of refinements
- ▶ Focus is on **project completion**

|     |  |
|-----|--|
| Mon | Unicode<br>Internationalization in Rails |
| Tue | REST                                     |
| Wed | More Security<br>Performance, Deployment |
| Thu | <i>Project presentations</i>             |
| Fri | <i>Finishing</i>                         |

# 6 CP = 180 h

- ▶ About 36 h of mandatory preparation (learn Ruby)
- ▶ About 32 h of frontal instruction (with some discussion)
- ▶ About 8 h of student presentations (with lots of discussion)
- ▶ About 104 h of:
  - conversation with customers
  - implementation, testing
  - on-line learning
  - peer-teaching

- ▶  $144\text{h}/12\text{d} = 12\text{h}/\text{d} =$

**INTENSE**

# Who is going?

- ▶ Funny:
  - Half is sophomore (1st term)
  - Half is graduate level (7th term or more)
  
- ▶ Great mix for getting students to learn and teach at the same time.

# What they liked

- ▶ Ruby
- ▶ Rails
- ▶ The format (2 intense weeks in one room with many iMacs)
- ▶ The combination/mix of presentations and practice
  - some discussion about the distribution in time
- ▶ The snowballing/communication breaks

# What they didn't like (1)

- ▶ No time for groceries and laundry
  - Next time, we'll tell them beforehand

**INTENSE**

Insert image of sleepy, stressed out students here

# What they didn't like (2)

- ▶ I brought up TDD only on the fifth day
  - to be fixed
- ▶ I used a (long) screencast in class
  - don't do that
- ▶ Some of my slides still at the previous level of Rails
  - shame on me

# What I liked

- ▶ Incredible level of motivation
  - coupled with high level of (voluntary) mutual cooperation
- ▶ Students' own experience mixes with my guidance and their ad-hoc research
  - In the end, I probably learned even more than the students
- ▶ Students like AWE
  - “This has been the best course I have attended at a university”

Insert image of students in computer room with some bottles of beer clearly visible here

# Rails is moving — fast

- ▶ Much of the material out there is in 1.0-land
    - or somewhere not far beyond
  - ▶ Start-with-SQL vs. migration approach
  - ▶ Classic vs. REST
  - ▶ (see DHH's keynote)
- 
- ▶ You want to demonstrate best practices from the start
    - but they change

# What could be fixed in Rails

- ▶ (to make setup of teaching environments easier:)  
fix the SQLite support
  - most groups migrate (!) to MySQL after a couple of days
- ▶ the “docs” (actual comments unprintable)
- ▶ symbols vs. strings
- ▶ i18n, l10n (at least make the plugins more reliable)
- ▶ Today’s students want IDEs, code browsers, refactoring, ...

# So, can you teach Rails at a Uni?

- ▶ Yes, you can!
  - But you probably should think fresh
  - Model **teaching** on actual **usage**
- ▶ AWE course: Demanding
  - 2-week **blackout**
  - Have to **re-work** much of it every year
- ▶ Why isn't it done in more places?
  - Unis are conservative?
  - Ignorance? Haughtiness?
