# Real World Cloud Infrastructure with Red Hat Enterprise Virtualization and Red Hat Network Satellite

Tim Scully  
Jackpine Technologies Corporation

David Egts  
Principal Architect, Red Hat

23 June 2010

**SUMMIT**

JBoss  
WORLD

PRESENTED BY RED HAT

# Agenda

Brief Virtualization, Satellite and Cloud Overview

Understanding our customer's requirements

Architecting the solution

Customer benefits

Lessons learned

Future growth and expansion

**SUMMIT**

JBoss  
WORLD

PRESENTED BY RED HAT

# Before we can build the solution, we need to understand the technologies..

**SUMMIT**

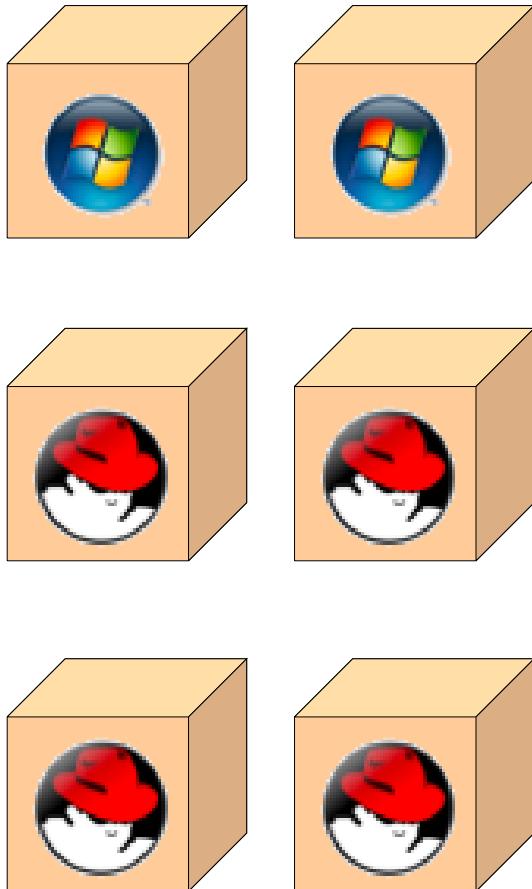

JBoss  
WORLD

PRESENTED BY RED HAT

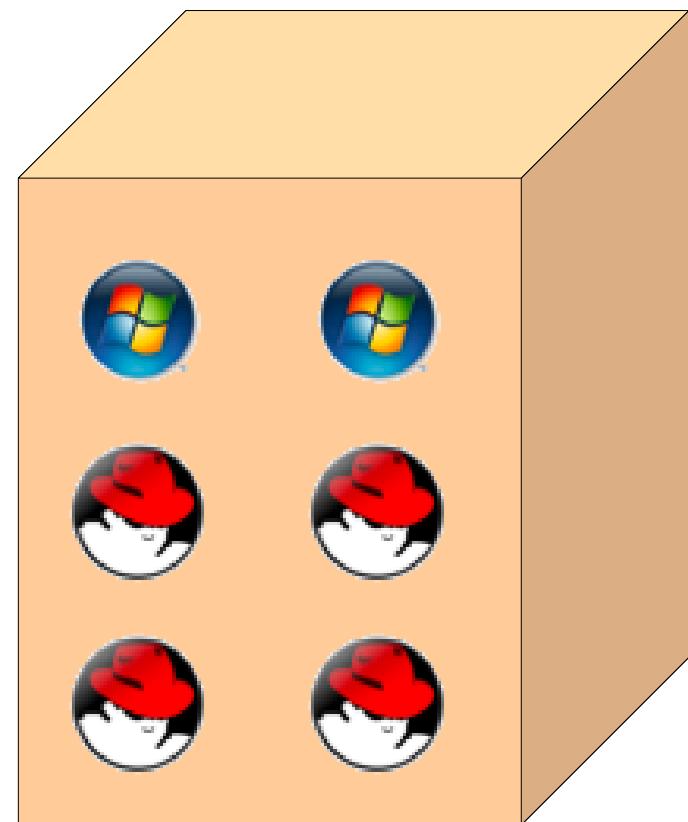

# Virtualization in a nutshell

6 OS on 6 discrete platforms

6 OS on 1 discrete platform

**SUMMIT**

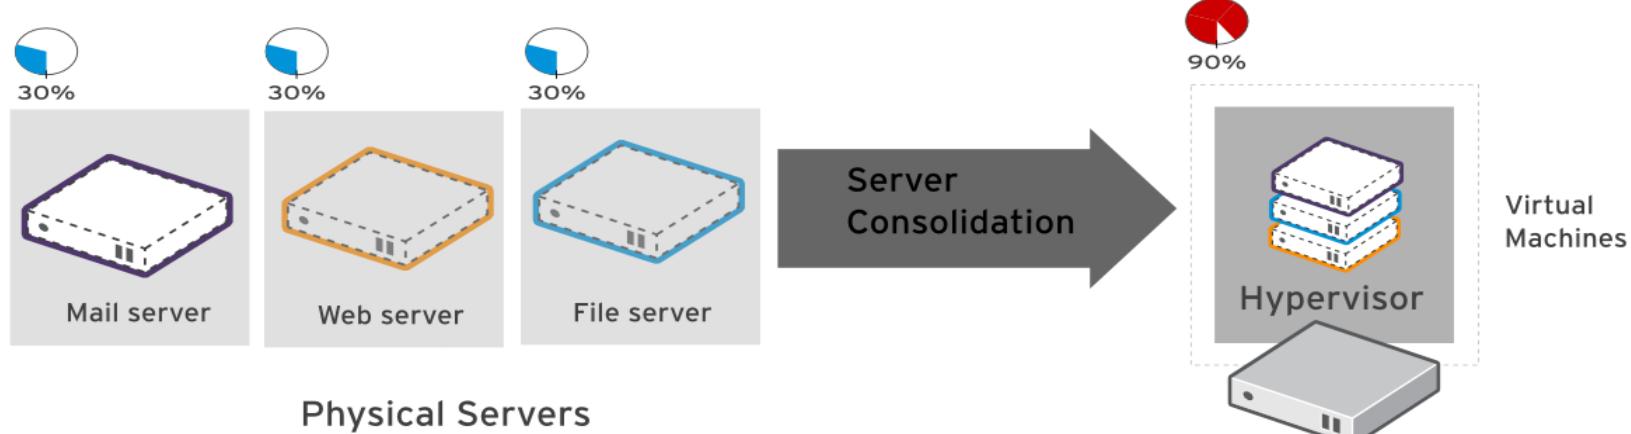

JBoss  
WORLD

PRESENTED BY RED HAT

# Benefits of Virtualization

- Reduce Costs
  - Improve server utilization
  - Reduce hardware costs
  - Reduce power and cooling costs
  - Improve management efficiency
  - Increase capital efficiency
- Improve Business Agility
  - Rapidly respond to business needs
  - Operational scalability
  - Rapid provisioning
  - Business continuity
- Security
  - System isolation and sVirt

**SUMMIT**

**JBoss  
WORLD**

PRESENTED BY RED HAT

# Red Hat Virtualization

Currently 3 Approaches

- Xen in RHEL
  - Supported until 2014
- KVM in RHEL
  - Full Virtualization
  - Part of the RHEL 5 distro
- Red Hat Enterprise Virtualization (RHEV)
  - Full Virtualization
  - < 100MB Distribution = really tiny.

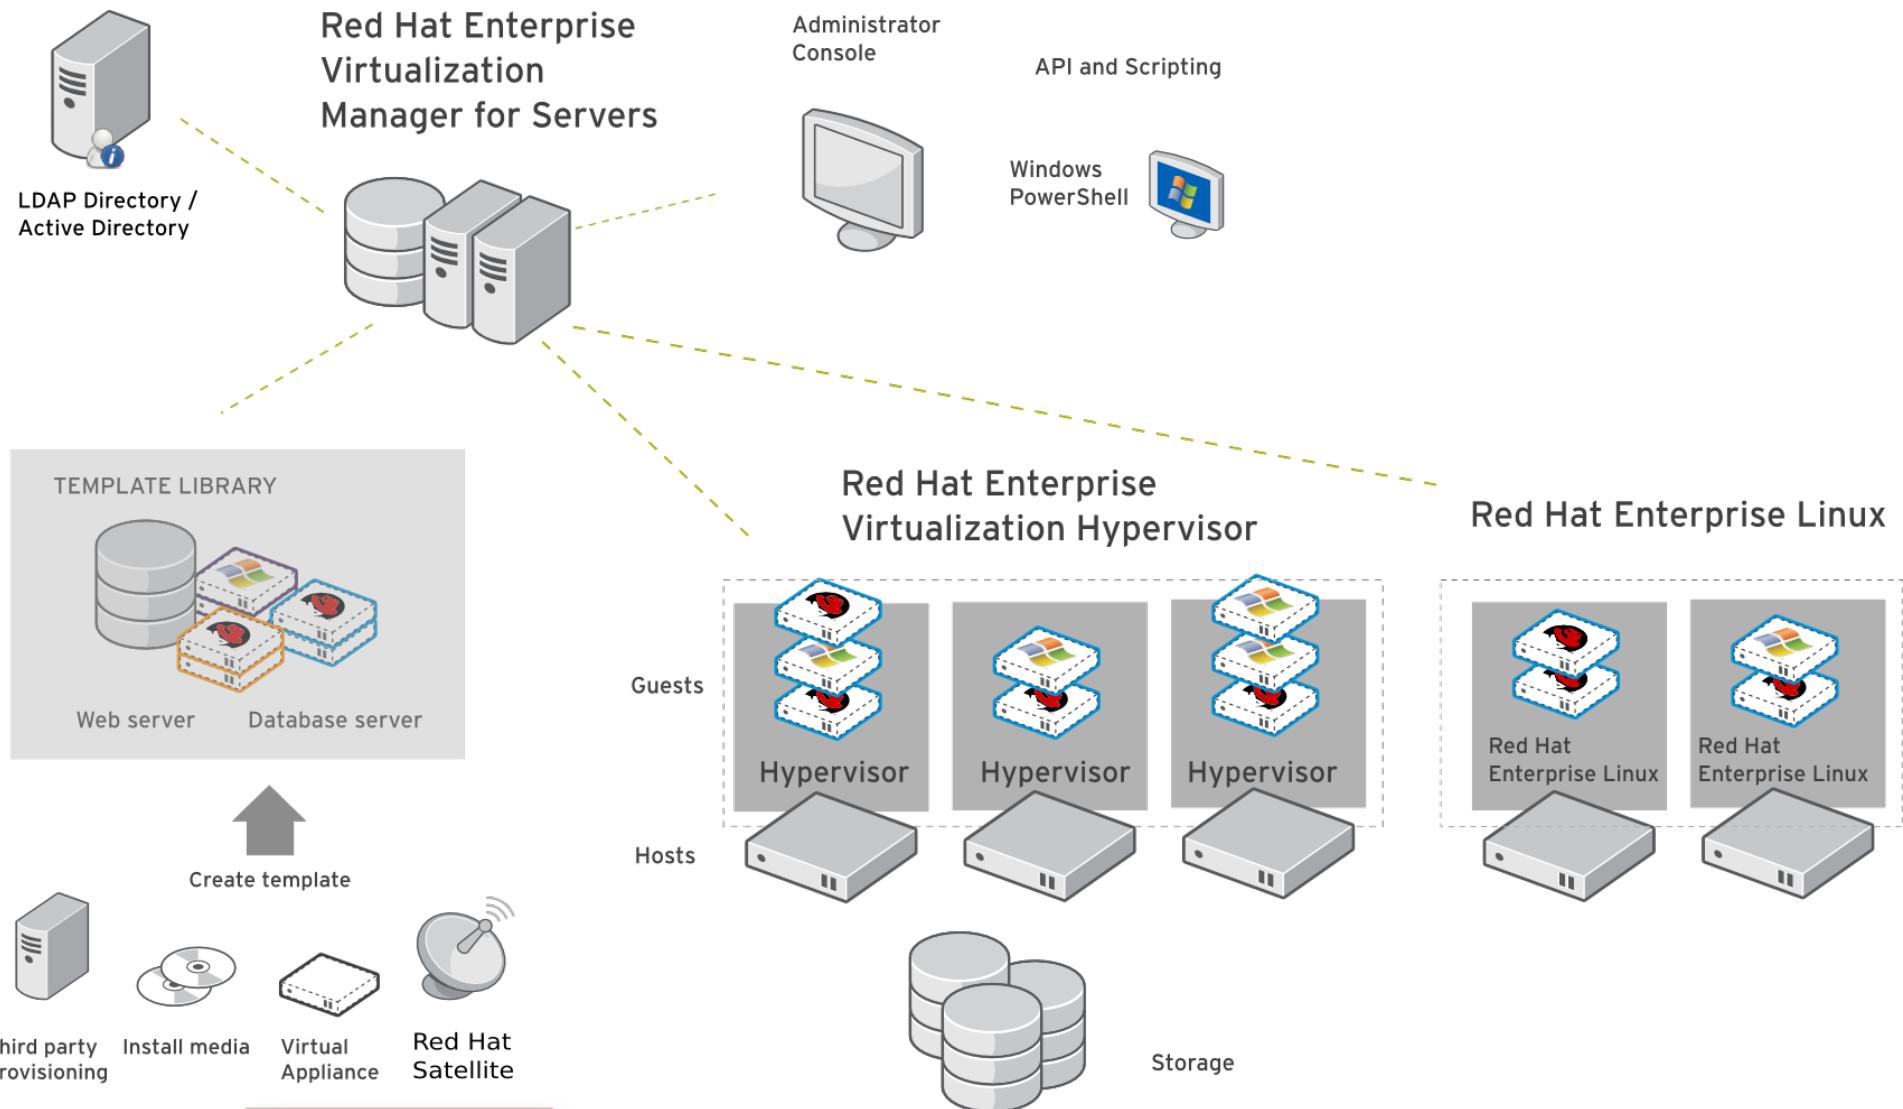

**SUMMIT**

JBoss  
WORLD

PRESENTED BY RED HAT

# Red Hat Enterprise Virtualization

**SUMMIT**

**JBoss  
WORLD**

**PRESENTED BY RED HAT**

# Red Hat Enterprise Virtualization Features

Feature	Description
High Availability	Restart VMs from failed hosts automatically on other hosts
Live Migration	Move running VM from one host to another – 0 downtime, 0 sessions lost
System Scheduler	Continuously load balance VMs based on resource usage/policies
Power Saver	Concentrate VMs on fewer servers during off-peak hours – save power
Maintenance Manager	0 downtime for VMs during planned maintenance window
Image Manager	Snapshots, templates, overlays, save/restore
Monitoring and Reporting	For all objects in system – VM guests, hosts, networking, storage, etc.

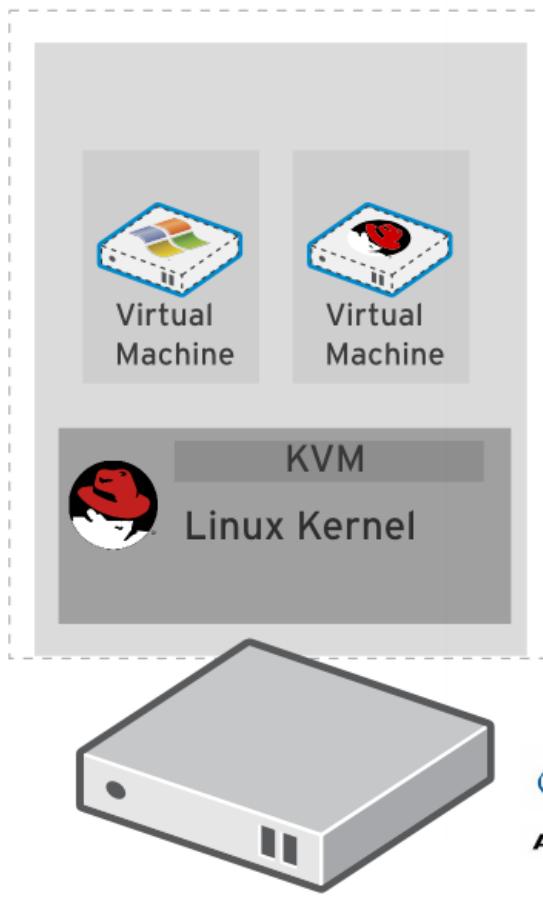

**SUMMIT**

**JBoss  
WORLD**

**PRESENTED BY RED HAT**

# RHEV Hypervisor

x86 Hardware

**SUMMIT**

JBoss  
WORLD

PRESENTED BY RED HAT

- **Standalone Hypervisor**
  - Small footprint < 100MB
    - Customized 'spin' of RHEL 5
    - Security hardened image
    - Runs on all RHEL5 hardware with VT/AMD-V
    - 'Just enough' RHEL to run virtual machines
  - Easy to install, configure and upgrade
    - PXE boot, USB boot, CD or Hard drive
  - Scalability
    - 256 cores & 1TB ram on Host
    - 16 virtual CPUs and 256GB ram guest

# Red Hat Satellite

Your own personal RHN...

- Systems Management Platform for Linux and x86 Solaris
- Management, Provisioning and Monitoring
- Host custom channels
- Hierarchical model for layers of distribution management in large deployments

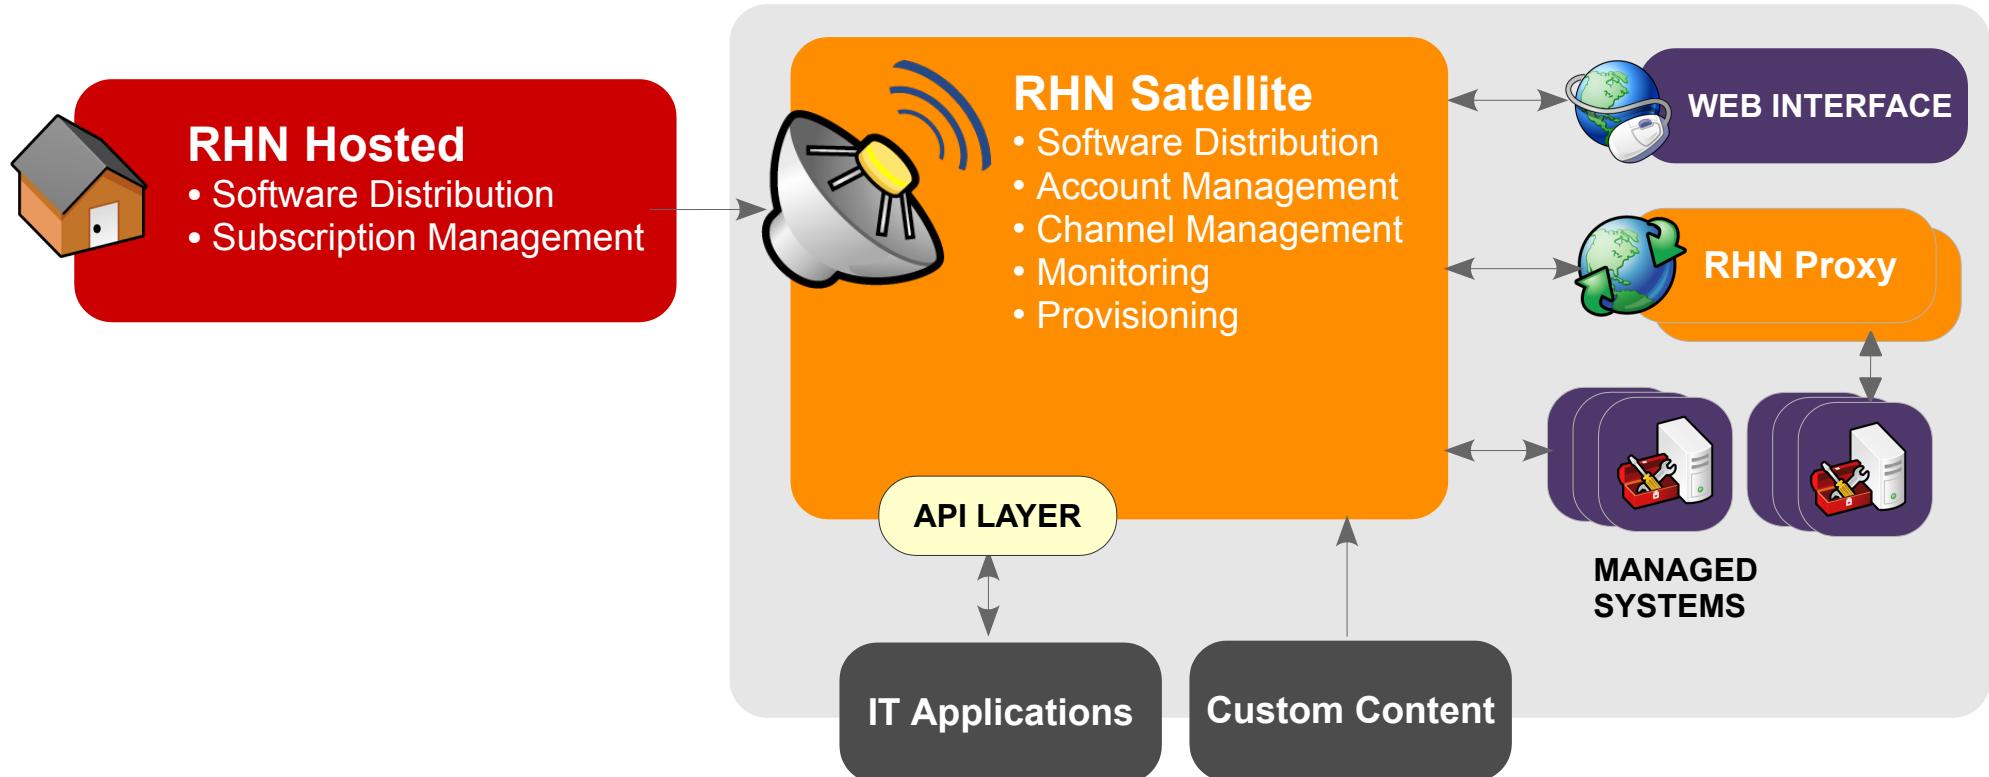

**SUMMIT**

JBoss  
WORLD

PRESENTED BY RED HAT

# Satellite Deployment Model

- Syncs content from RHN Hosted and custom content distribution
- Can run disconnected from the Internet
- Local database stores all packages, profiles, and system information

**SUMMIT**

**JBoss  
WORLD**

**PRESENTED BY RED HAT**

# Automated Provisioning

- Concepts
  - Network (PXE) Boot raw OS or bootstrap a template
  - Scripted / Machine driven installation/configuration
- Provisioning Tools
  - Cobbler Linux installation server <https://fedorahosted.org/cobbler>
  - Puppet <http://www.puppetlabs.com/>
  - Satellite (Contains Cobbler Functionality)
- Ghosting and Imaging are not (purist) provisioning
  - Configuration Management becomes cumbersome

SUMMIT

JBoss  
WORLD

PRESENTED BY RED HAT

# What is Cloud Computing?

- A way to access application hosted on the web through your web browser (Software as a Service)
- A pay-as-you-go model for IT resources accessed over the Internet (Platform as a Service)
- Use of commodity computers, distributed throughout an internet, to perform parallel processing, distributed storage, indexing and mining of data
- Gartner: “Cloud computing is a style of computing where massively scalable IT-related capabilities are provided 'as a service' across the Internet to multiple external customers”

SUMMIT

JBoss  
WORLD

PRESENTED BY RED HAT

# Before we can design a solution, we need to understand the requirements..

**SUMMIT**

JBoss  
WORLD

PRESENTED BY RED HAT

# Customer Mission

- “Provide C4ISR Infrastructure to enable a secure scalable environment to support R&D, DT/OT&E, exercises, experimentation, acquisition development and direct warfighter support”
  - **C4ISR:** Command, Control, Communications, Computers, Intelligence, Surveillance and Reconnaissance
  - **DT:** Developmental Test
  - **OT&E:** Operational Test and Evaluation

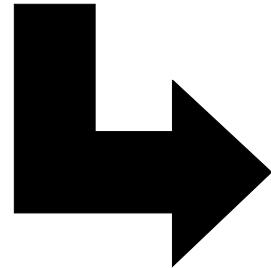

SUMMIT

JBoss  
WORLD

PRESENTED BY RED HAT

# Customer's Practice...

**SUMMIT**

**JBoss  
WORLD**

PRESENTED BY RED HAT

# Customer's Current Approach

- Manual Labor Intensive & time consuming
  - Cabling (power, comms, peripherals)
  - Compute hardware setup/teardown measured in weeks
- No Persistence
  - Trials, experiments and configurations vanish as hardware is re-used by the next customer
- Inventory
  - Literally rooms of hardware on the shelf waiting to be used
  - Inventory management a full-time job

SUMMIT

JBoss  
WORLD

PRESENTED BY RED HAT

# Derived Requirements

- Customer basically needs to provide:
  - Basic compute platforms, storage and networks
  - Environmental – HVAC, power, floor/rackspace, etc
  - Operations and maintenance manpower
  - Access to a variety of networks
    - Open and closed
    - Various classification levels
  - Security (physical, network, data)

SUMMIT

JBoss  
WORLD

PRESENTED BY RED HAT

# Our Goal

Leverage modern virtualization and storage technology to facilitate the customer's mission and streamline their operations and processes

**SUMMIT**

JBoss  
WORLD

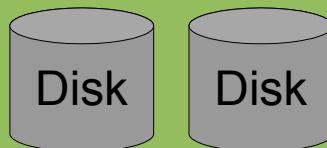

PRESENTED BY RED HAT

# Architecture

## Storage

- 3 TB NAS
  - RAID 5 + 1
  - Roughly 1.3 TB usable
- House VM Images
- Critical to VM migration amongst hypervisors

**SUMMIT**

JBoss  
WORLD

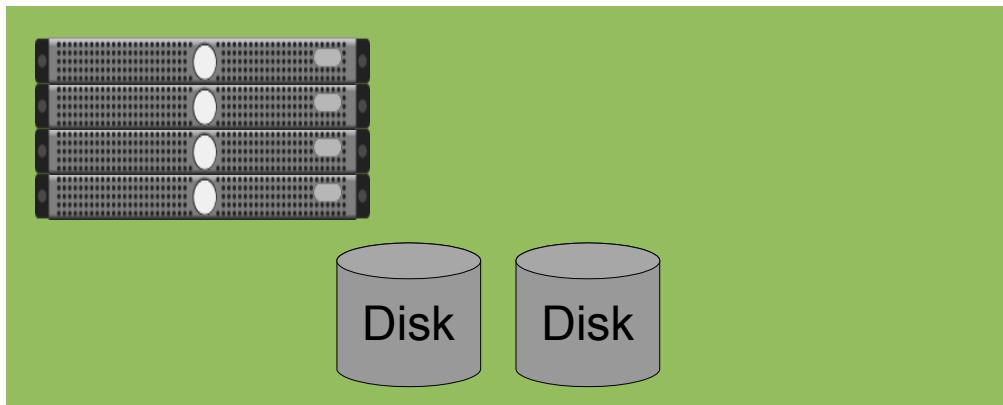

PRESENTED BY RED HAT

# Architecture

## Processing Hardware

- Dell 1950s
  - VT Capable
  - 8-16 GB RAM per
- Multiple NICs
- Local disk space negligible

**SUMMIT**

JBoss  
WORLD

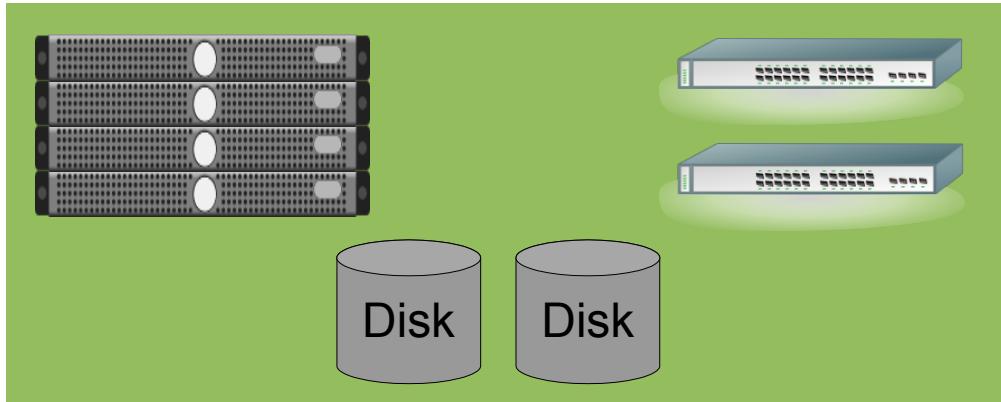

PRESENTED BY RED HAT

# Architecture

## Networking

- Virtual Networks
  - Bridges and Switches
- Physical Switches
  - Storage: 1000/s
  - Management: 1000/s
  - Internal: 100/s
  - Outbound: 100/s

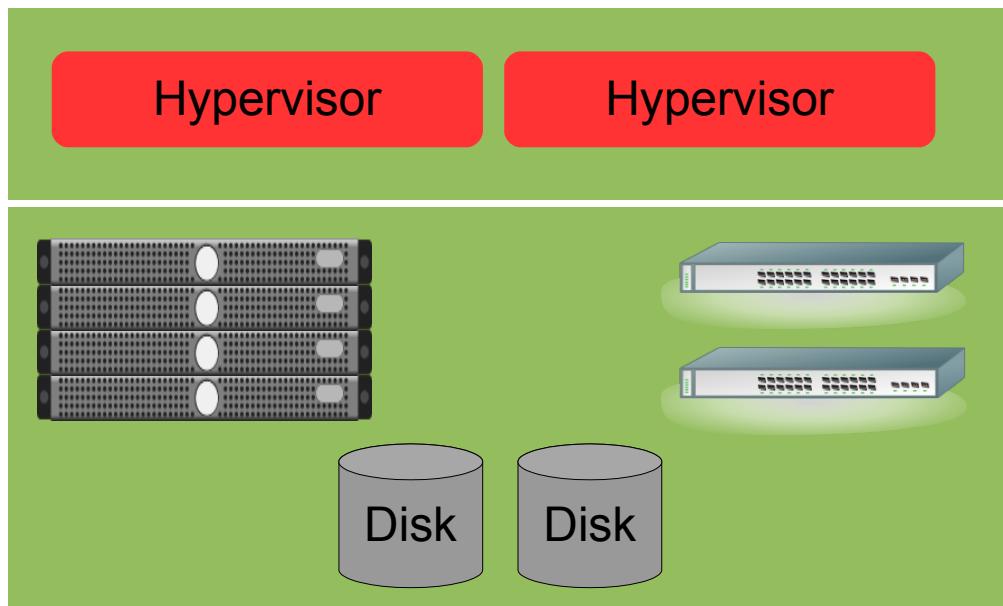

**SUMMIT**

JBoss  
WORLD

PRESENTED BY RED HAT

# Architecture

## Hypervisor

- RHEV-H
- “RHEL-H”
  - RHEL 5.4 AP
  - KVM
  - RHEV Extensions
    - Connect to RHEV-M
- VMware ESX

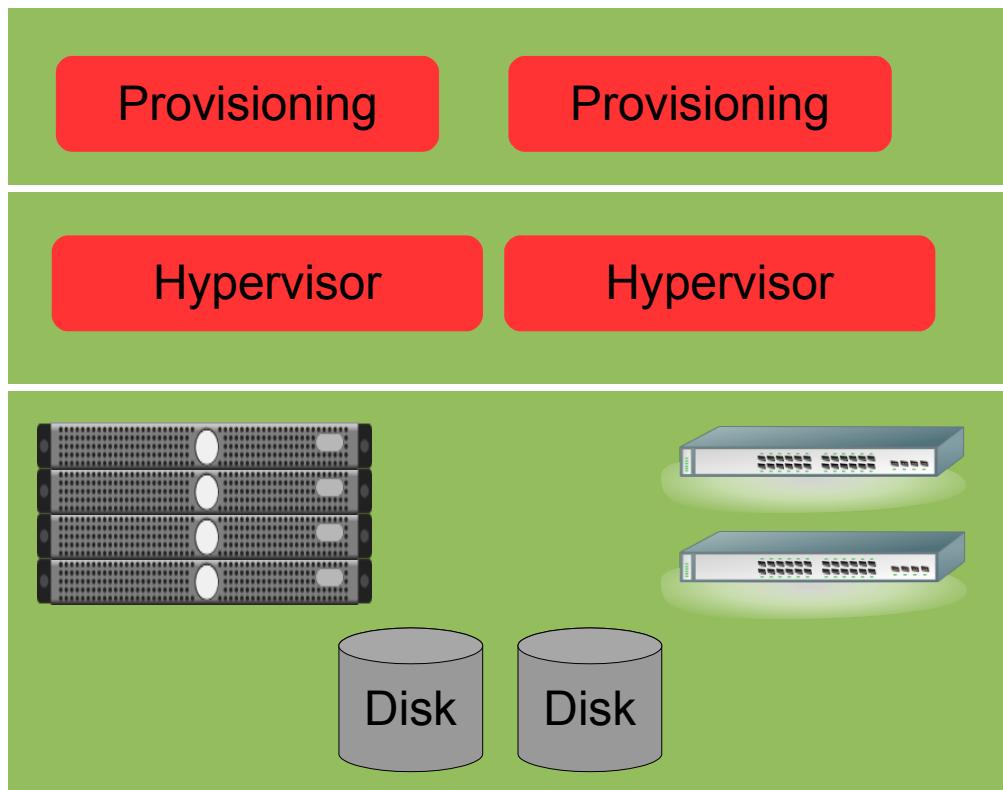

SUMMIT

JBoss  
WORLD

PRESENTED BY RED HAT

# Architecture

## Provisioning

- Satellite
  - PXE Boot new VMs
  - Updates for VMs
  - Create custom channels
  - Distribute custom RPMs

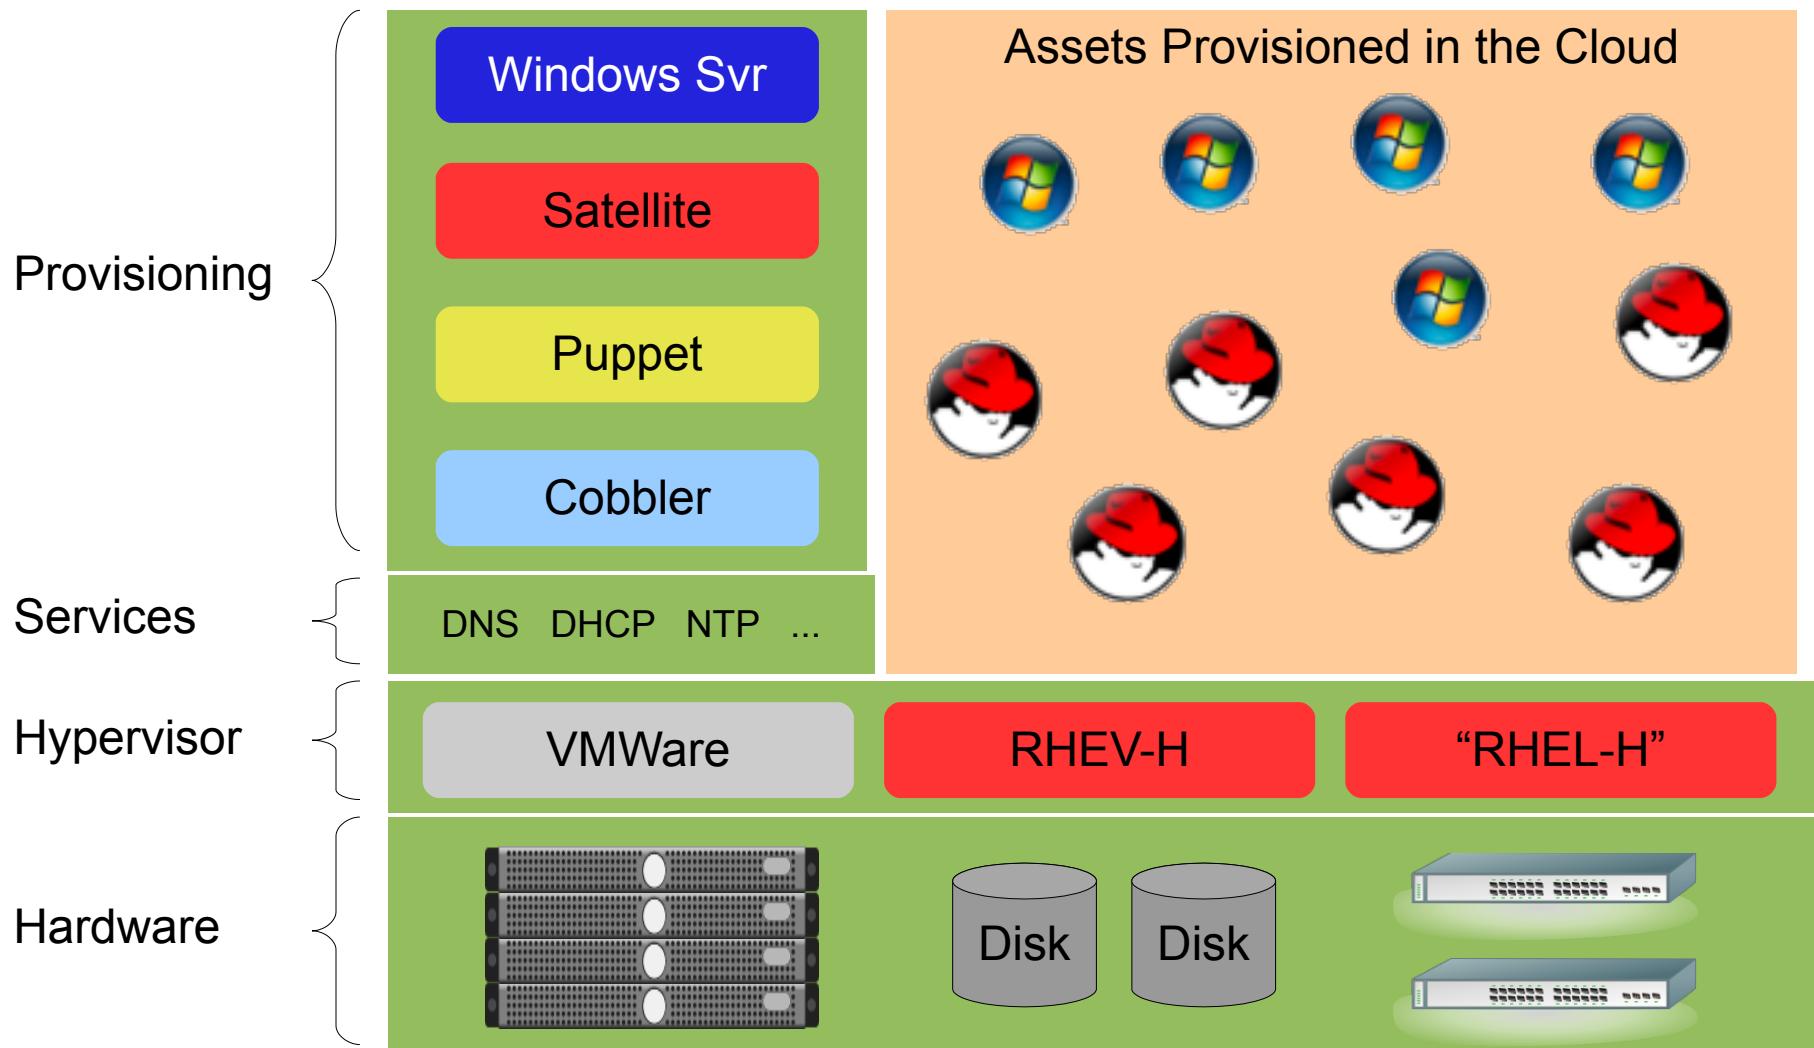

SUMMIT

JBoss  
WORLD

PRESENTED BY RED HAT

# Putting it all together

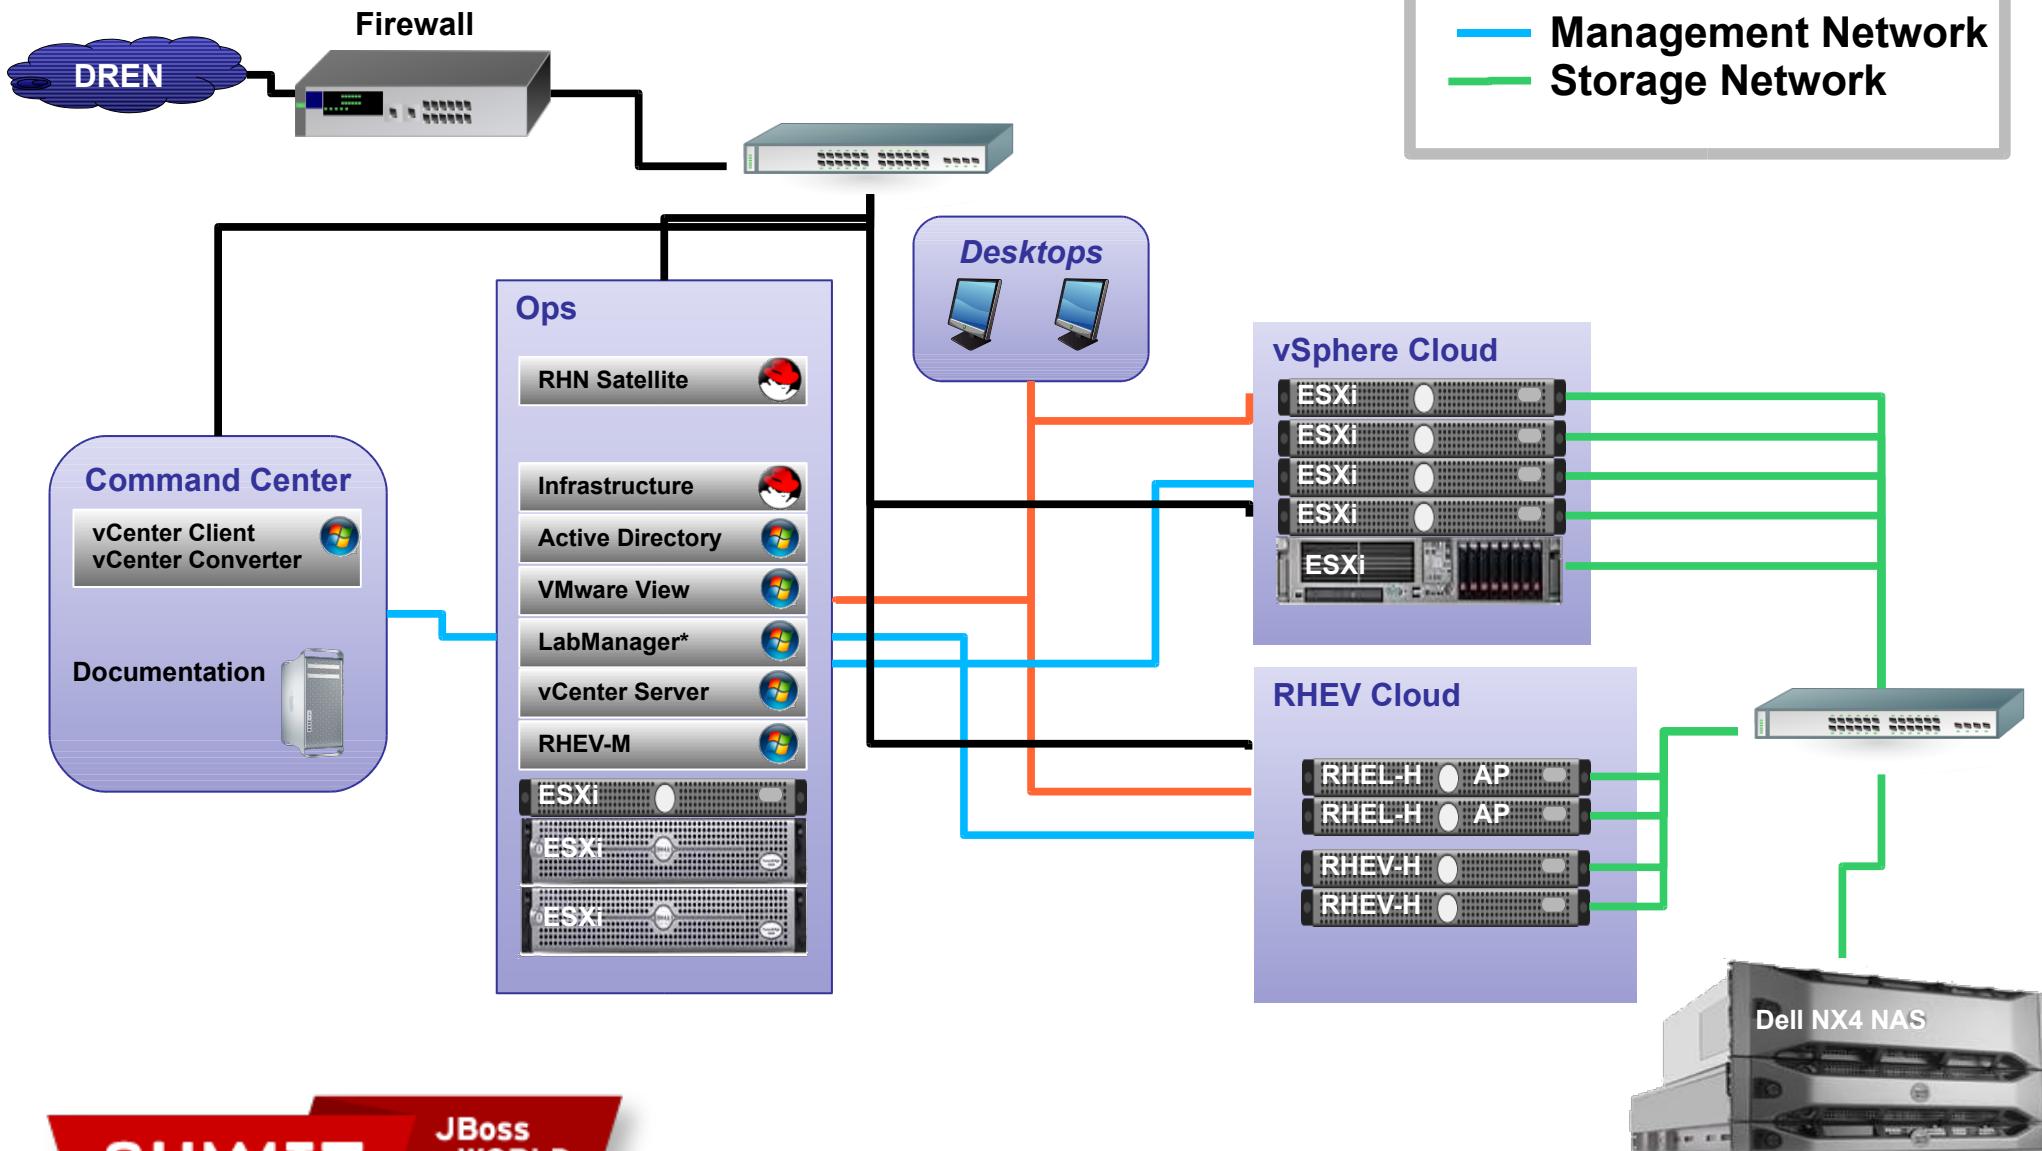

**SUMMIT**

JBoss  
WORLD

PRESENTED BY RED HAT

# Customer Architecture

## Key

- Outbound Network
- Internal Network
- Management Network
- Storage Network

**SUMMIT**

**JBoss**  
**WORLD**

PRESENTED BY RED HAT

# How do we get there?

No Big Bang!

- Gradual building out of the environment
  - Cloud patterns offer the ability to add resources as needed, perfect for building over time so long as the right architecture is implemented from the start
- Satellite at the core
  - Provision and update RHEL VMs
  - Provision and update RHEV Hypervisors!
- New technologies phased in over time

**SUMMIT**

JBoss  
WORLD

PRESENTED BY RED HAT

# Physical Environment

- Racks
  - Mounted like-equipment together
  - Lots of cable ties
- Networking
  - At least 4 NICs per server to support separated networks
- Install basic infrastructure server
  - DNS, DHCP, NTP, etc

SUMMIT

JBoss  
WORLD

PRESENTED BY RED HAT

# Satellite

- Hardware Configuration
  - Dell 2850, 3.0 GHz Xeon, 12GB RAM
  - RHEL 5.4, x86\_64 with Xen Hypervisor
- Satellite Server
  - Guest OS, RHEL 5.4 with 8GB dedicated RAM
  - OS Disk: 20GB RAID 1
  - Satellite Disk: 100GB RAID 5
    - /var/satellite (60GB) and /rhnsat (15GB)
- Use Satellite to provision the other Red Hat systems

SUMMIT

JBoss  
WORLD

PRESENTED BY RED HAT

# Build out Hypervisors

- RHEV-M
  - Install first to have available for hypervisors to discover during install
- RHEV-H
  - Super-simple installation
  - Boot off RHEV-H CD, follow prompts to install
    - Only the “management” network interface is required at this point of the build process
    - Configuring other interfaces will only get in the way of joining hypervisors to RHEV-M

SUMMIT

JBoss  
WORLD

PRESENTED BY RED HAT

# Build out Hypervisors

- “RHEL-H” AP
  - Install minimal RHEL 5
    - Basically just Base and vi
  - Firewall and SELinux on, enabled and enforcing
  - Don't create any users
  - RHN or Satellite registration recommended
    - Recommended: build a “RHEL-H” channel for additional packages

- On RHN:
  - bridge-utils
  - kvm-qemu-img
- Separate Download:
  - OpenIPMI-tools
  - lm\_sensors
  - net-snmp
  - net-snmp-utils
  - sg3\_utils-libs
  - sg3\_utils
  - pexpect
  - fence\_agents

SUMMIT

JBoss  
WORLD

PRESENTED BY RED HAT

# Configure Storage

- Dell NX4 (rebranded EMC Celerra)
  - Configure RAID device
  - Set up iSCSI target(s)
- Attach hypervisors/managers to storage

SUMMIT

JBoss  
WORLD

PRESENTED BY RED HAT

# Install other infrastructure if needed

- VMware
- Windows
- Solaris
- etc...

**SUMMIT**

JBoss  
WORLD

PRESENTED BY RED HAT

# Cloud is ready

- Install test guests
- Configure and test migration amongst hypervisor hardware
- Made cloud available to first customer
  - Technical Exchange Meeting for demo/integration
  - Over 20 virtual machines imported into the cloud and used in integration and interoperability experiments and demonstrations
- Turned the cloud over to the customer

**SUMMIT**

JBoss  
WORLD

PRESENTED BY RED HAT

# Cloud Benefits for customer

- Reduced Manual Labor
  - Centralized resource pooling (CPU, storage)
  - Minimal cabling to run and contained in processing racks
- Persistence
  - VMs can be stored on SANs for later use
  - VMs can be archived for historical purposes
- Physical Space
  - Hardware inventory is consolidated into resource pools and used on-demand - no rooms set aside for hardware storage

**SUMMIT**

JBoss  
WORLD

PRESENTED BY RED HAT

# Automated Provisioning Benefits for customer

- Repeatable configurations
  - Makes DT and OT manageable
    - Automated portions of system configurations are automatically documented and controlled
    - Take exact config from test directly to operations
- Reduced build time and cost
  - Machine provisioning inherently faster than manual
  - Reduced demand on SysAds and Engineers
  - Build the automated routine once, reuse often

**SUMMIT**

JBoss  
WORLD

PRESENTED BY RED HAT

# Results = Zero to Cloud in 30 days...

- Design and build the cloud
- Customer training on the cloud environment
  - Administration and maintenance of the infrastructure
  - How to leverage for their future use
- Environment was completed to support a Technical Exchange Meeting for an unrelated customer
  - Over 20 VMs imported into the environment and used for demo and experimentation purposes
- Initial seed for future growth and expansion

**SUMMIT**

JBoss  
WORLD

PRESENTED BY RED HAT

# Lessons Learned

- Second-hand equipment took a while to reconnoiter and repair before we could use it
  - Literally 3 attempts to resurrect old NAS hardware before receiving permanent solution (Dell NAS)
  - Firmware upgrades, broken parts, bad disks, etc

SUMMIT

JBoss  
WORLD

PRESENTED BY RED HAT

# Lessons Learned

- We were so excited to build, we didn't plan enough
  - Plan, plan and plan until you can't take it anymore
    - It'll save moving equipment in the long run
  - Didn't account for the time needed to refurb equipment
  - Numerous architecture changes (IP spaces, equipment allocation, etc) slowed us down

**SUMMIT**

JBoss  
WORLD

PRESENTED BY RED HAT

# Lessons Learned

## Networking

- Use separate switches for each network, if possible
  - VLANs are workable, but add complexity to configuration
- Color-coded CAT6 helps a LOT

**SUMMIT**

JBoss  
WORLD

PRESENTED BY RED HAT

# Lessons Learned

- SAN vs. NAS
  - A SAN is the more appropriate platform to provide shared storage for a cloud
    - Fibre channel is faster, but more expensive
    - iSCSI on the SAN more cost effective
    - SAN more suited to expansion and growth than NAS
  - iSCSI from a NAS is sufficient for small deployments
    - Risk bogging down storage network as deployment grows

SUMMIT

JBoss  
WORLD

PRESENTED BY RED HAT

# Lessons Learned

- Satellite Server should be cornerstone
- Need to market this capability to potential customers, or no one will know about it
- Paradigm shift more difficult than the technology
  - Admins need to learn the “cloud way” of doing things
  - Think in abstract resources vice tangible hardware
  - Users need to be comfortable with machines they can't physically touch

**SUMMIT**

JBoss  
WORLD

PRESENTED BY RED HAT

# Future efforts

- Implement RHEV-D
  - Allows for “guest terminals”
  - Provide user workstations for access to Cloud VMs
- Deeper Satellite integration
  - Add RHEV-H provisioning
  - Augment “RHEL-H” provisioning
  - Automate security lockdown (guests and hypervisors)
- DeltaCloud

SUMMIT

JBoss  
WORLD

PRESENTED BY RED HAT

# Useful Satellite Features

- Custom Channels
- PXEBoot bare-metal to RHEV hypervisor
- PXEBoot bare-metal or bare-VM to RHEL
- Consolidated views of managed inventory
  - OS and Update levels
  - System inventory
    - Management, grouping, etc

SUMMIT

JBoss  
WORLD

PRESENTED BY RED HAT

# Useful RHEV Features

- Quickly and easily manage storage and hosts
- ParaVirt drivers increase performance on full virt guests

**SUMMIT**

JBoss  
WORLD

PRESENTED BY RED HAT

# Concluding Thoughts...

- A small initial investment can produce REAL results in a very short timeframe
- Clouds allow for small and large organizations to start with what they need, and grow over time by adding additional storage and processing
- Small learning curve on technologies
  - Satellite and RHEV super easy to implement and use
- Planning is key!
  - Required capacity
  - Physical layout
