

# Red Hat Ceph Storage: Past, Present and Future

Neil Levine  
Director of Product Management  
2017

# THE RED HAT STORAGE ECOSYSTEM

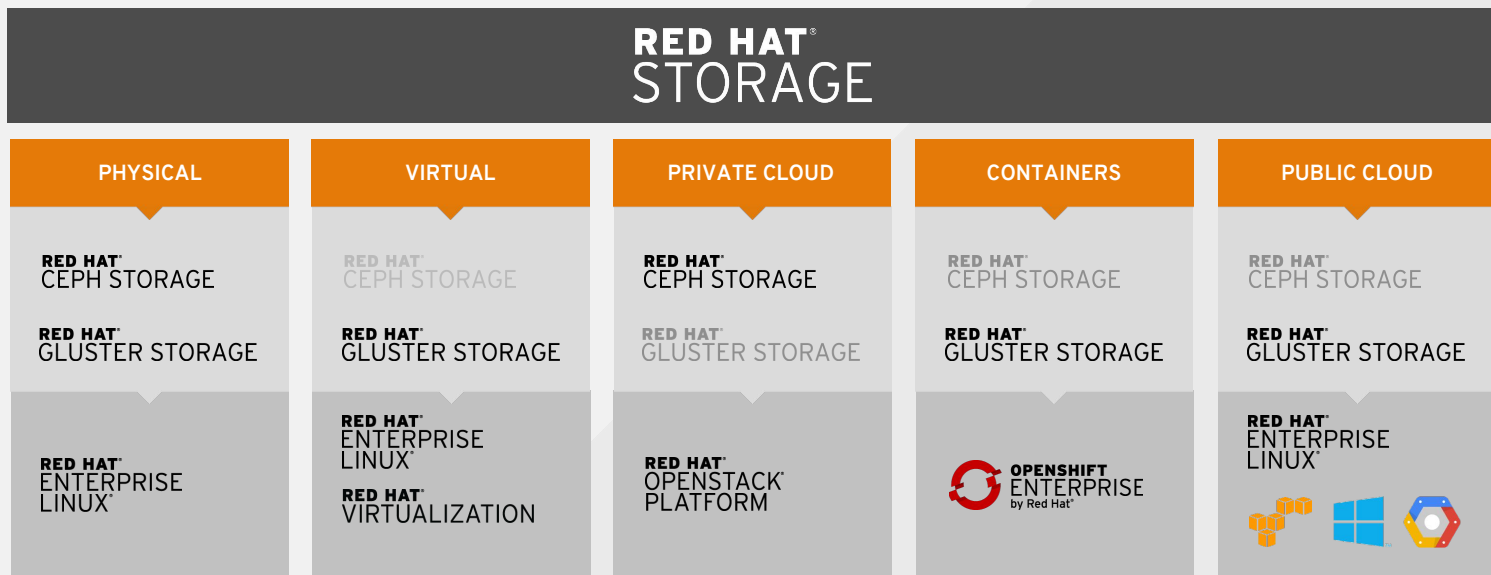

Standard interfaces and full APIs ease integration with applications and systems

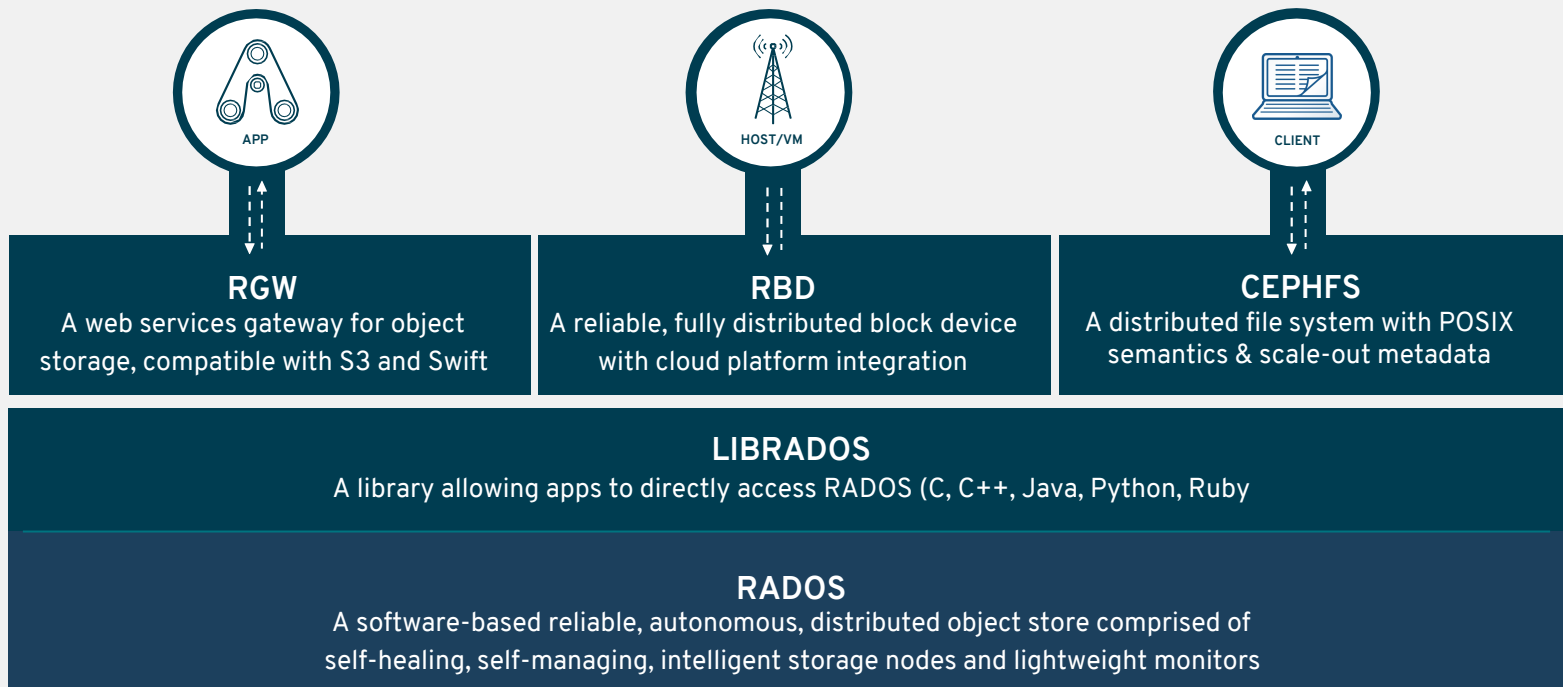

Self-managing and self-healing software provides durability and adapts to changes

Industry-standard hardware provides choice and can be tailored for specific workloads

# Red Hat Openstack Momentum

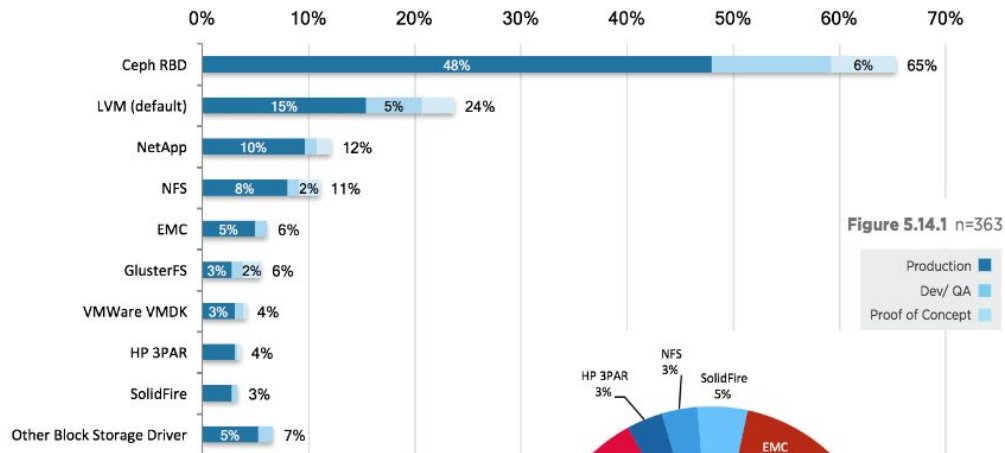

Figure 5.14.1 n=363

Among the largest clouds with 1,000 or more cores, Ceph RDB is still dominant, but not used by the majority, while other block storage drivers were also popular.

These projects are currently active in the Ceph development community. They may be available and supported by Red Hat once they reach the necessary level of maturity.

# iSCSI

## CONFIGURATION SUMMARY

- IGW (Gateways) require RHEL 7.3
- Single Portal per Gateway (node)
- CHAP based authentication
- 2-4 gateways per ceph cluster
- Active/passive multi-pathing (ALUA)
- Ansible based configuration management
- Dedicated or colocated gateways

# BlueStore

- Removes XFS layer
- 2-3x Performance Boost
- Flexible hardware topologies
- Optimized IO for media type
