Preface

The ganglia Roll installs and configures the ...

Please visit the ganglia site¹ to learn more about their release and the individual software components.

Notes

1. <http://link-here.html>

Chapter 1. Requirements

1.1. Rocks Version

The ganglia Roll is for use with Rocks version 4.1 (Fuji).

1.2. Other Rolls

The ganglia Roll is does not require any other Rolls (other than the HPC Roll) to be installed on the Frontend. Compatibility has been verified with the following Rolls.

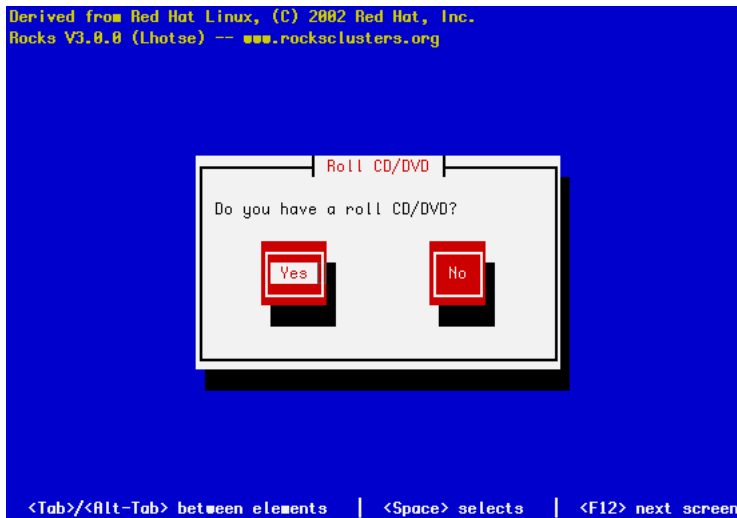

- HPC

Chapter 2. Installing the ganglia Roll

2.1. Adding the Roll

The ganglia Roll must be installed during the Frontend installation step of your cluster (refer to section 1.2 of the Rocks usersguide). Future releases will allow the installation of the ganglia Roll onto a running system.

The ganglia Roll is added to a Frontend installation in exactly the same manner as the required HPC Roll. Specifically, after the HPC Roll is added the installer will once again ask if you have a Roll (see below). Select 'Yes' and insert the ganglia Roll.

Chapter 3. Using the ganglia Roll

3.1. Using the ganglia Roll

Tutorials for using ganglia and its components are available from the ganglia web site¹
