SESSION ID: MASH-F02

Website counterintelligence: Leveraging web logs to gather intelligence

Lance Cottrell

Chief Scientist
Ntrepid - Passages
@LanceCottrell

CHANGE

Challenge today's security thinking

Anonymity is hard

Everything is tracked

All the time

Everywhere

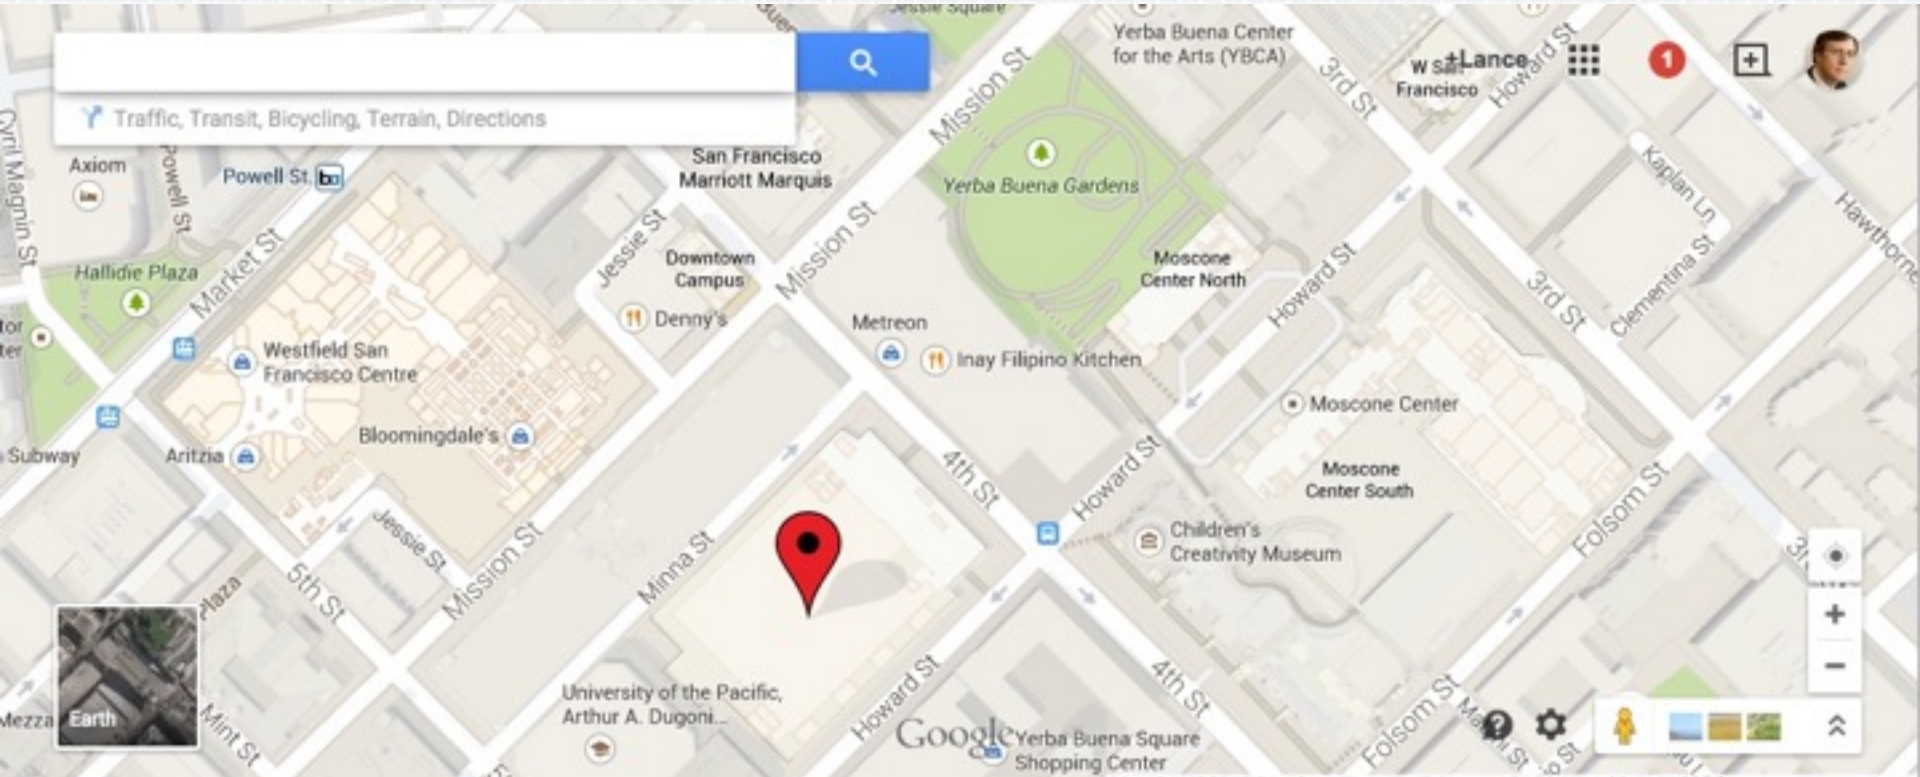

How Anonymity Fails

- ◆ Cookies
- ◆ IP
- ◆ Traceroute
- ◆ History
- ◆ Fingerprint
- ◆ Human Error
- ◆ **Behavior**

Google Uses Behavior

RSA[®]Conference2015

San Francisco | April 20-24 | Moscone Center

What can you learn from
your logs?

 #RSAC

Let's put me under the microscope

Angel Investing

RSA[®]Conference2015

San Francisco | April 20-24 | Moscone Center

Doing unto others

 #RSAC

Step 1: Identify visitors so you can track them

Direct Identification from the IP

Reverse DNS

```
$ host 107.77.92.56
```

```
Host 56.92.77.107.in-  
addr.arpa. not found:  
3(NXDOMAIN)
```

Whois

```
$ whois 107.77.92.56
```

```
NetRange:      107.64.0.0 - 107.127.255.255  
CIDR:          107.64.0.0/10  
NetName:       ATT-MOBILITY-LLC  
NetHandle:     NET-107-64-0-0-1  
Parent:        NET107 (NET-107-0-0-0-0)  
NetType:       Direct Allocation  
OriginAS:        
Organization:  AT&T Mobility LLC (ATTM0-3)  
RegDate:       2011-02-04  
Updated:       2012-03-20
```

Solicited Identification

- ◆ Newsletter
- ◆ Webinar registration
- ◆ White-paper registration
- ◆ Account creation

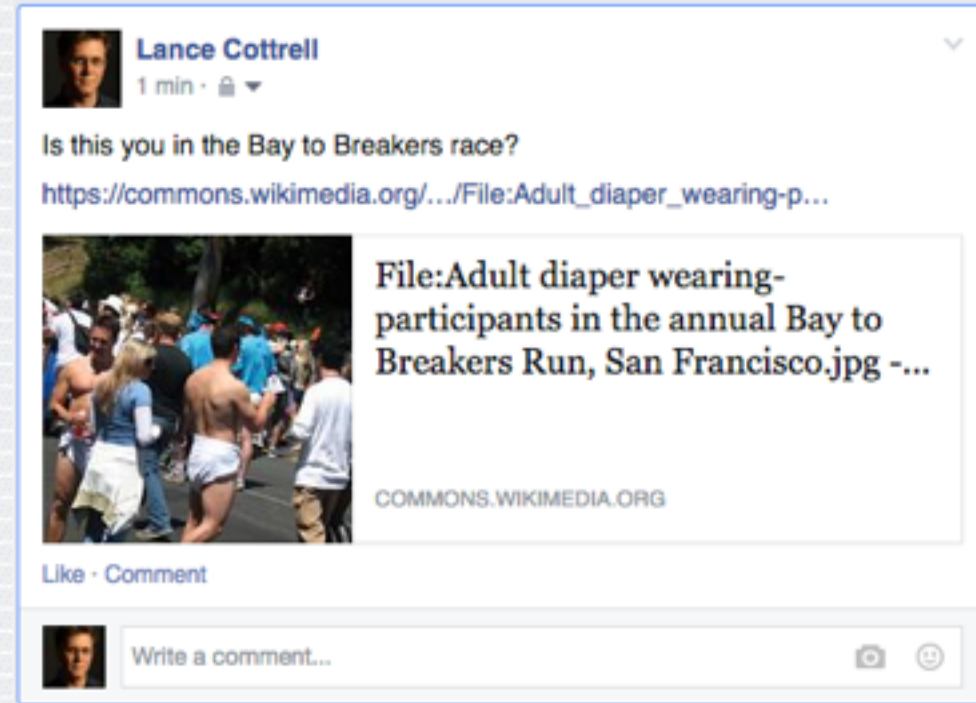

4 Aggressive Tricks for Identification

1. Targeted Social Media links
2. “Phishing” email
3. Social Engineer for Corp IP blocks
4. HTML Bug in email

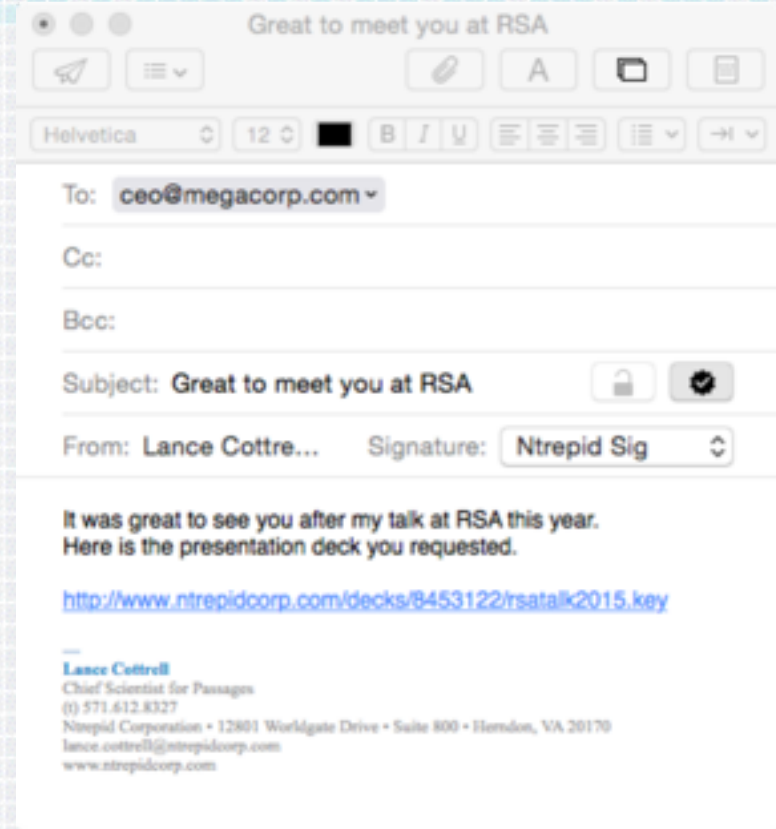

Targeted Social Media Links

- ◆ Create unique URL for some content.
 - ◆ <http://yourcorp.com/white-paper.pdf?unique=12345678>
- ◆ Share content with just the target
- ◆ Link IP addresses with the unique ID / target

“Phishing” Email

- ◆ As before, create unique URL for some interesting content.
- ◆ Send email with link to enticing content
- ◆ Link recipients with the unique ID / target

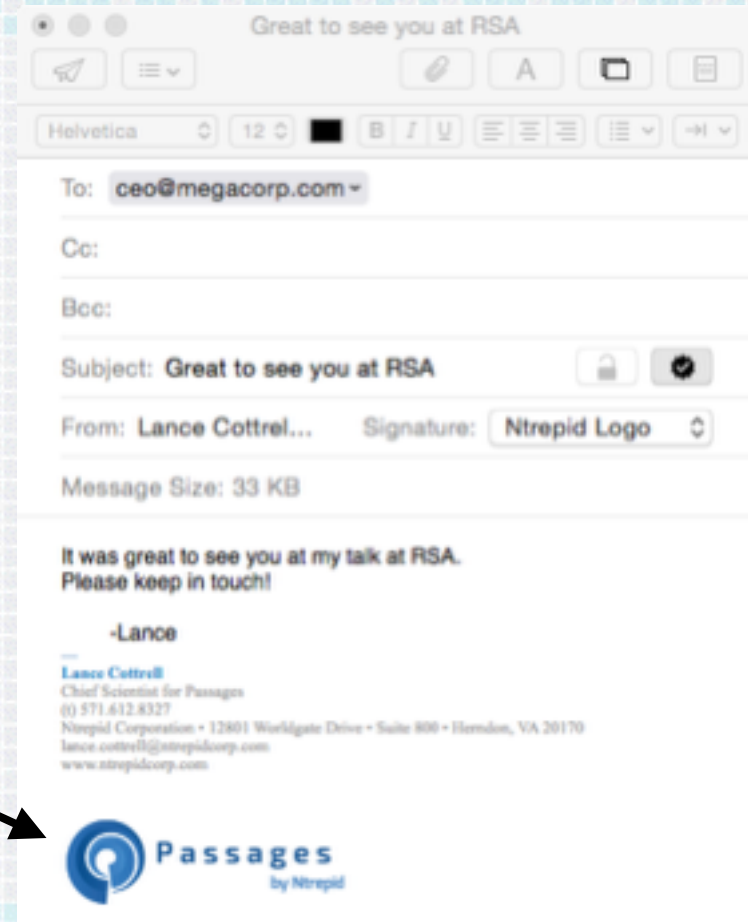

Social Engineer the Corp IP space

HTML Bug in Email

- ◆ Completely Automated
- ◆ No user action
- ◆ Passive with every email you send.

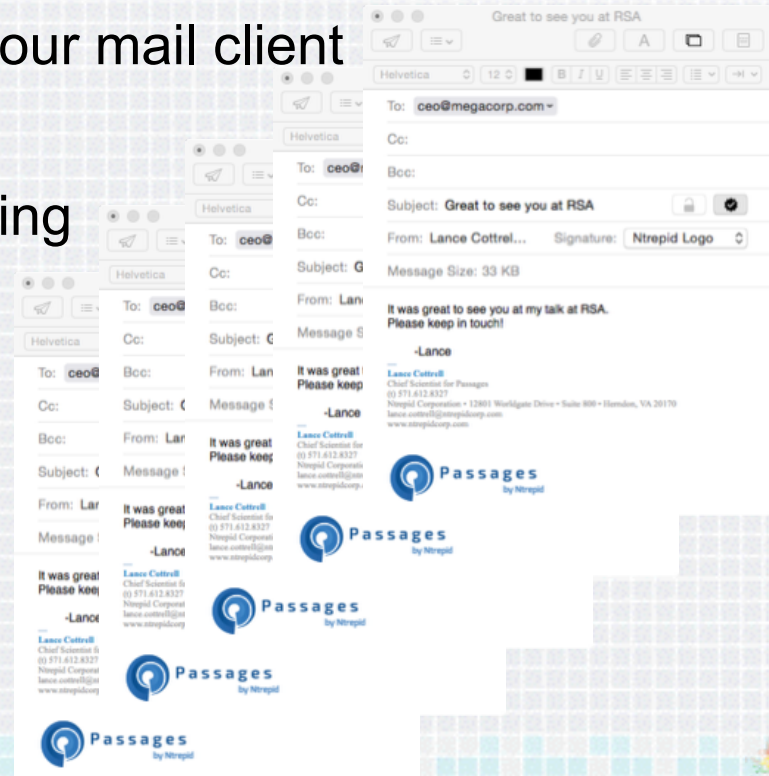

That

Create a Random Signature Tracker

- ◆ Create an HTML signature file in your mail client
- ◆ Find that signature file
- ◆ Add unique tag and identifiable string
- ◆ Change every 10 seconds

That looks like...

Signature Image Code

```

```

Signature File Updater

```
while (1) {  
    $unique = time() . "endmarker";  
    `cat $sigCpy | sed 's/XXXtnofbXX/$unique/g\' > $targetfile`;  
    sleep($sleeptime);  
}
```

Identify Who Got Which Tracker ID

- ◆ Scan sent email folder
- ◆ Extract the recipients and the tracker ID from each email
- ◆ Note: trackers and email addresses will be many to many

```
foreach unexamined email {  
    find the emails containing the marked signatures  
    extract the recipient information from the email  
    extract the unique ID from the email  
    put both in a database  
}
```

Connect IPs to IDs

- ◆ Scan your web logs
- ◆ Extract all the hits on your mail signature image file
- ◆ Record the IP addresses which have hit that unique Tracker
- ◆ This too can be a many to many relationship

```
example.com 70.197.23.21 - - [17/Feb/2015:18:23:34 +0000] "GET //  
siglogo.jpg?sig_tracker_identifrier8290=1424138085endmarker HTTP/1.1"
```

Step 2: Keep track of your target after identification

IP Address

Always there for you

May not be helpful

Cookies

- ◆ Cookies (and Super Cookies)
- ◆ Yeah....
 - ◆ obvious
 - ◆ simple
 - ◆ effective

Browser Fingerprints

Panopticlick

EFF research project

<http://panopticlick.eff.org>

Step 3: Pattern Analysis

"Textile cone" by Photographer: Richard Ling (richard@research.canon.com.au) - Location: Cod Hole, Great Barrier Reef, Australia. Licensed under CC BY-SA 3.0 via Wikimedia Commons - https://commons.wikimedia.org/wiki/File:Textile_cone.JPG#/media/File:Textile_cone.JPG

Usage Analysis

- ◆ Technical details are highly dependent on your particular hosting and analytics platforms.
 - ◆ Google Analytics is not granular enough.
 - ◆ Logs will likely need post-processing to be most useful

Create Topic Groups

- ◆ Group pages and web resources by type and topic
 - ◆ Which product / service
 - ◆ marketing
 - ◆ technical
 - ◆ help
 - ◆ corp
 - ◆ team
 - ◆ labs
 - ◆ weapons

Examples from our website

Cyber Security  Passages  Nfusion	Products	Timeline Analysis  Timestream
Web Scraping  Ion		Influence Analysis  Tartan
Tracking  Elusiv		Translation  Virtus

◆ Page Categories

- ◆ Team
- ◆ Media & Events
- ◆ White Papers
- ◆ Support
- ◆ FAQ

◆ Types of Targets

- ◆ Known Competitors
- ◆ Possible Competitors

Segment statistics

Hits Per Website Section

Flag outliers

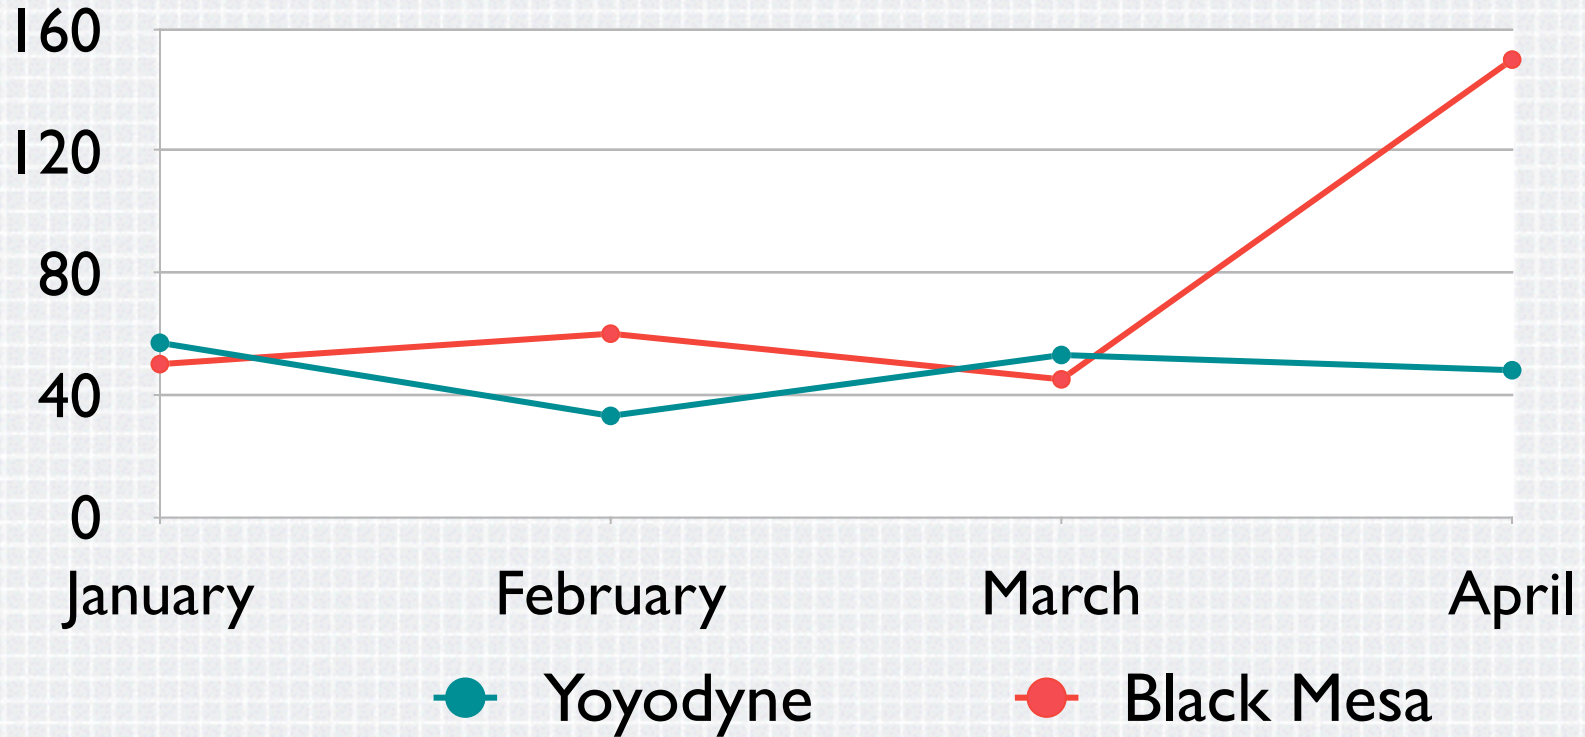

Who stands out

Black Mesa	Labs	Gun	Turret	AI	Gel
Weapons R&D	2	9	11	3	1
Biologics Lab	6	1	2	4	3
Marketing	8	3	45	10	12
Executives	30	4	12	6	9

Quick and Dirty

How to protect yourself

- ◆ Incognito mode in the browser (or better)
- ◆ Non-attributed IP address
- ◆ Disposable email addresses for registrations
- ◆ Turn off auto-download images in email
- ◆ Clean VM or iOS for competitive research

Next Steps

- ◆ When you get back:
 - ◆ Start detailed logging of URL and IP addresses
 - ◆ Create groups of web pages based on product and purpose
- ◆ In the next few months:
 - ◆ Identify Targets for tracking
 - ◆ Initiate target acquisition for top priorities
- ◆ Within six months you should:
 - ◆ Implement tracking bug
 - ◆ Automate target acquisition
 - ◆ Initiate analysis of data
