## **As a New CISO – How to Assess Your Security Program for Success**

**Gary Hayslip**

---

Chief Information Security Officer  
City of San Diego, California  
@ghayslip

# **CHANGE**

Challenge today's security thinking

*As a New CISO – You'll have more questions than answers*

*"Visibility"*

## "Cyber is a Business Enabler"

*5 Steps I have used for Success*

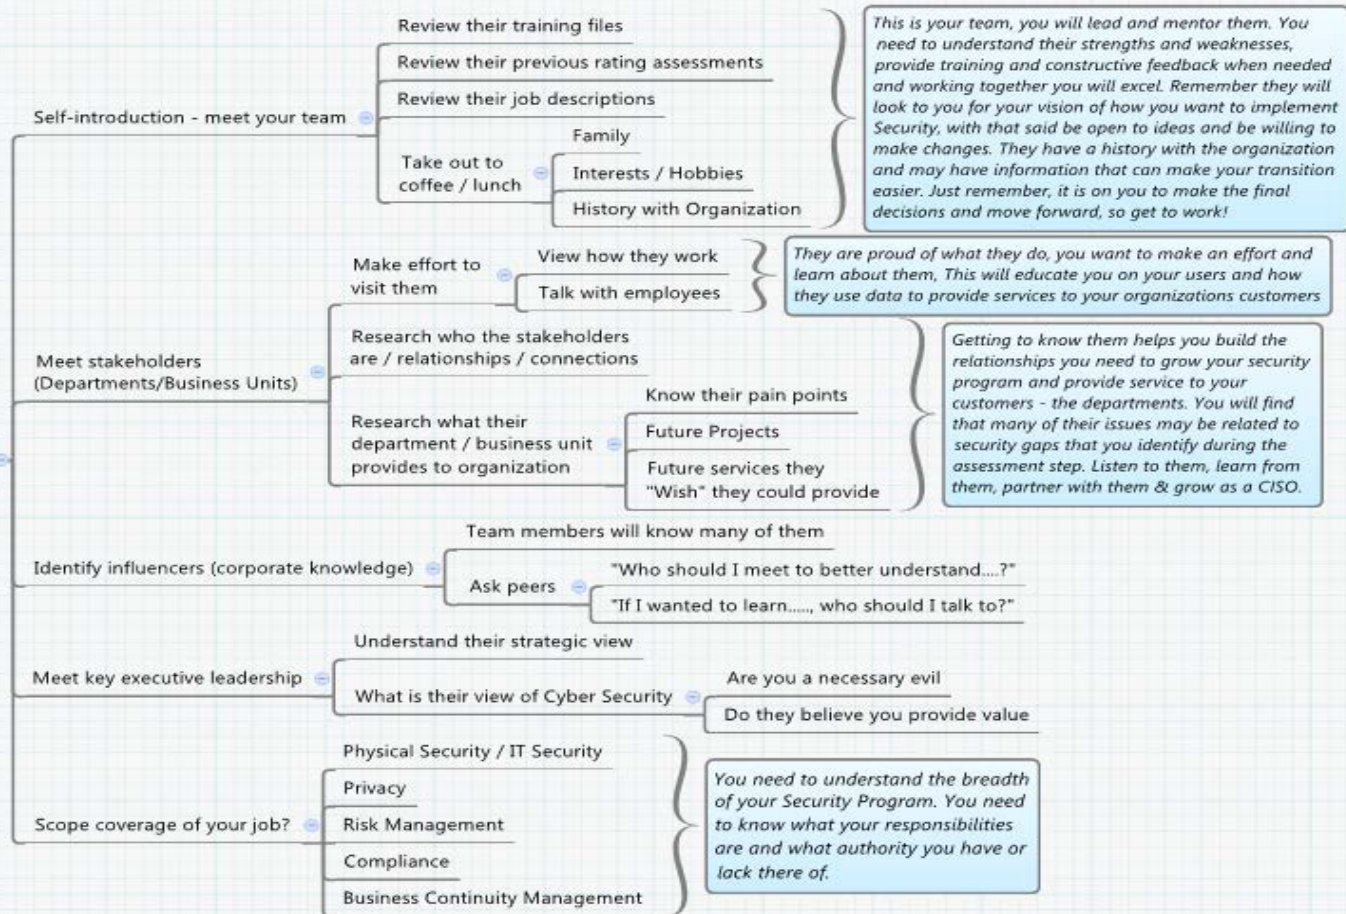

# Step 1 – “*The Meet & Greet*”

- ◆ “Security doesn’t work in a Vacuum, however it works well in a Community”
  - ◆ Grow your “Human Network”
    - ◆ Meet your Team
    - ◆ Meet Your Stakeholders
    - ◆ Identify Influencers
    - ◆ Meet Key Executive Leadership
  - ◆ Know the responsibility & authority of your position
    - ◆ Sometimes its more than what you realize

**Step 1. Meet & Greet**

<https://app.box.com/RSA-CISOmindmaps>

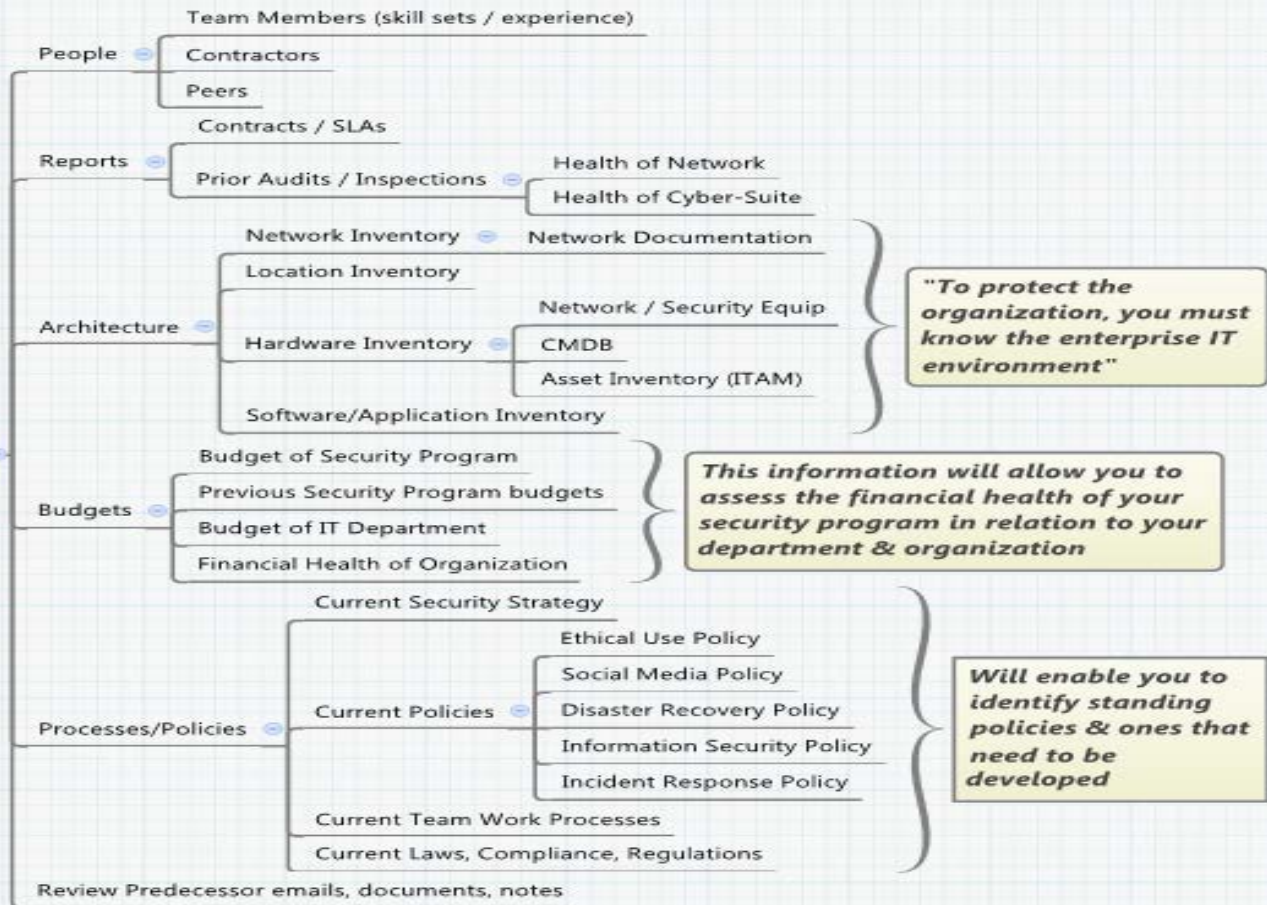

## Step 2 – “Inventory”

- ◆ “To protect your organization, know your enterprise environment”
  - ◆ People (Team Members, Contractors, Peers)
  - ◆ Reports (Contracts, Metrics, Prior Audits, Inspections)
  - ◆ Architecture (Network, Location, Hardware, Application, Cloud)
  - ◆ Budgets (Security Program, Department, Organization)
  - ◆ Processes & Policies
    - ◆ (Security Strategy, Policies, Workflows, Laws, Regulations, Compliance)
- ◆ Review your Predecessor’s documents, emails, notes.
  - ◆ Now review their notes on your team members

**Step 2. Inventory**

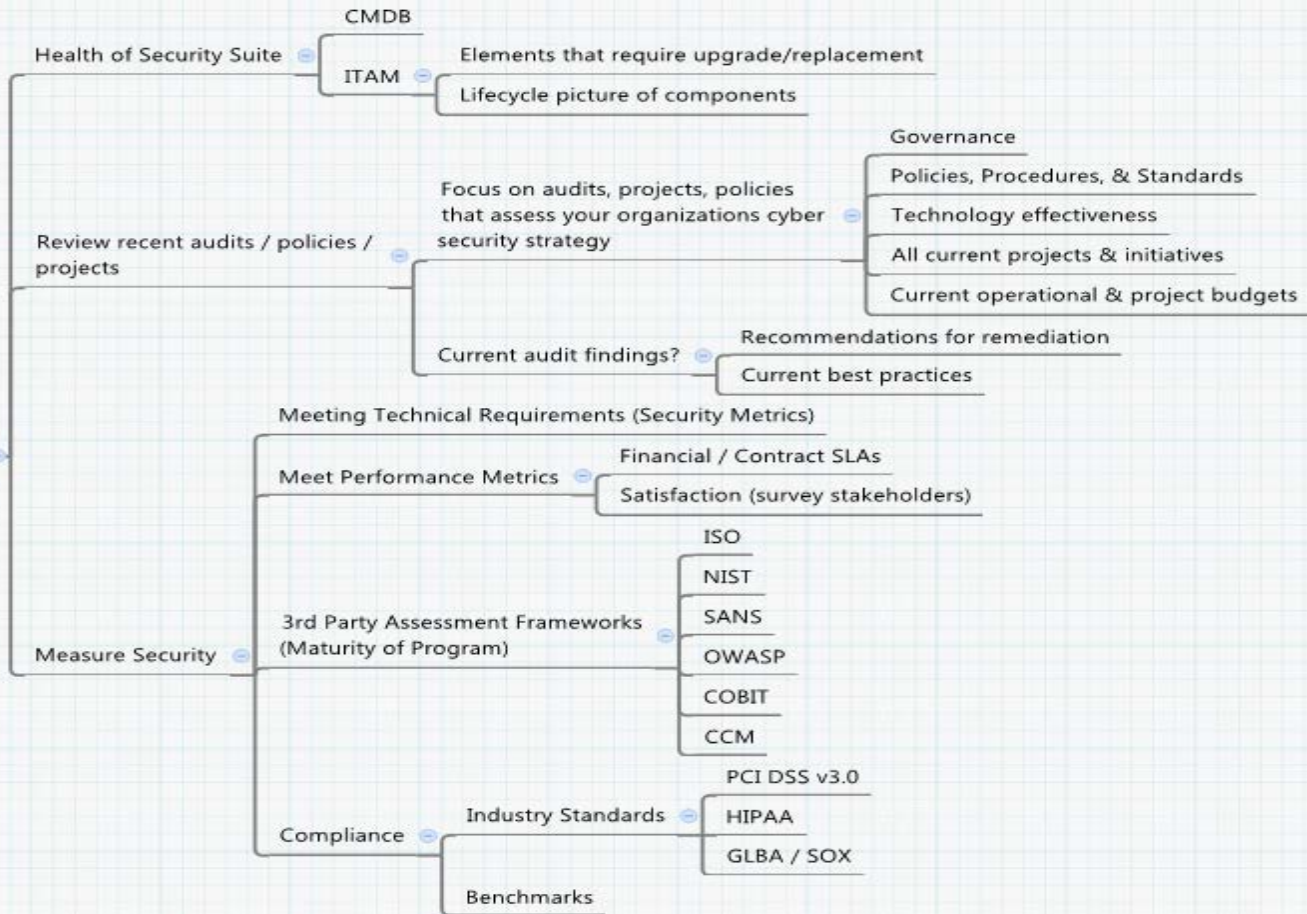

# Step 3 – “Assessment”

- ◆ “Continuous Assessment, establish and verify your baseline”
  - ◆ Health of your Security Suite
  - ◆ Review recent audits, policies, projects
    - ◆ Current audit findings, recommendations?
  - ◆ Measure Your Security
    - ◆ Are you meeting your security metrics?
    - ◆ Are you meeting performance metrics?
    - ◆ Are you meeting 3<sup>rd</sup> Party Assessment Frameworks?
    - ◆ Are you meeting Compliance Requirements?

**Step 3. Assessment**

<https://app.box.com/RSA-CISOmindmaps>

## Step 4 – “Planning”

- ◆ “Your Security Program and Team are key to your Organization”
  - ◆ Draft your “Vision” of the Security Program
    - ◆ Challenges to the current program
  - ◆ Build your Strategic Security Project Plan
  - ◆ Use your Project Plan to build your Security Budget
  - ◆ Start Immediately (Momentum is key)
    - ◆ Will Correcting Issues = Clear Business Benefits?
    - ◆ Reduce Risk Exposure?
    - ◆ Will Fixing the Issues = Credibility for your Team?

**Step 4. Planning**

<https://app.box.com/RSA-CISOmindmaps>

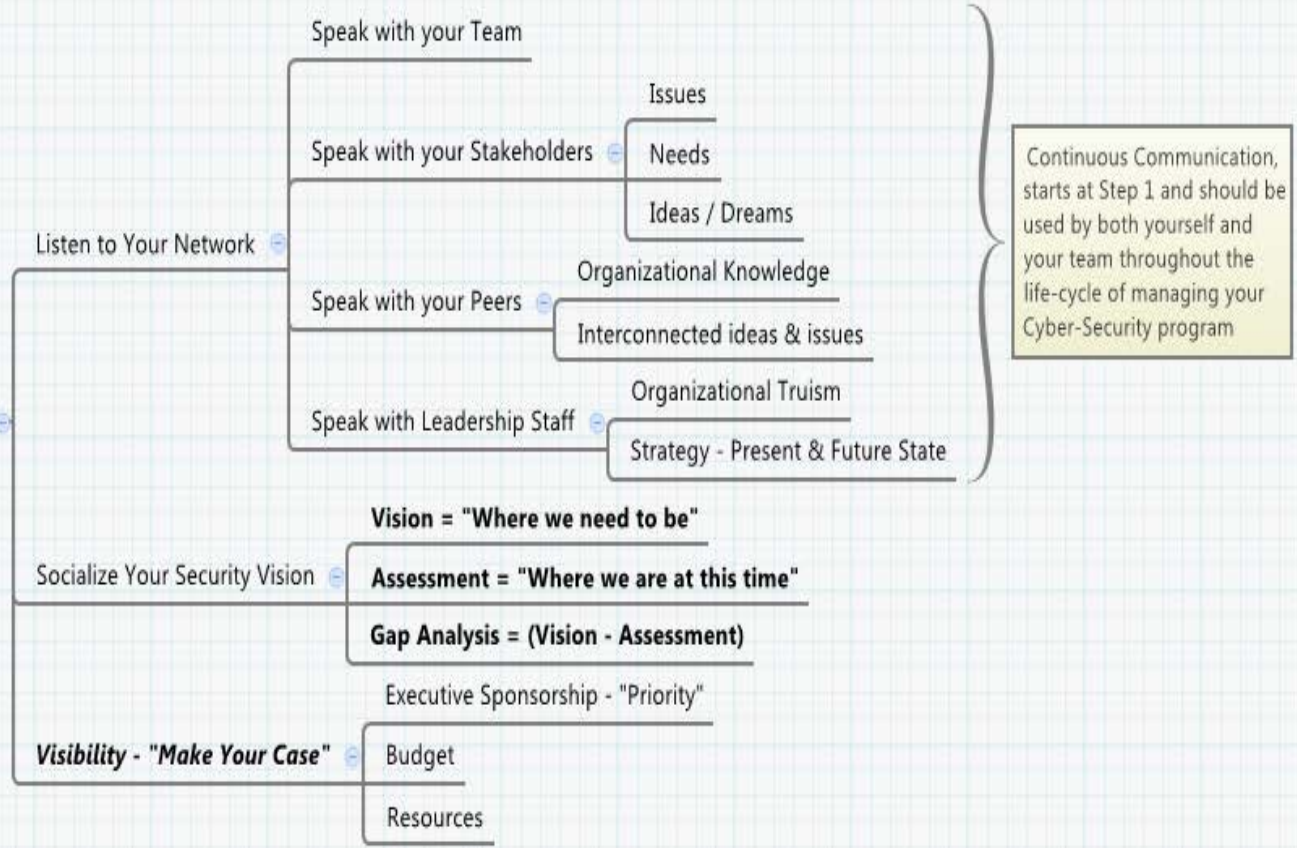

# Step 5 – “Communicate”

- ◆ “Visibility = Executive Sponsorship = Budget”
  - ◆ Socialize your Security Vision
    - ◆ Vision = “Where we want to be”
    - ◆ Assessment = “Where we currently are”
    - ◆ Gap Analysis = (Vision – Assessment)
    - ◆ Gap Analysis = Strategic Security Project Plan = Security Budget
  - ◆ Socialize the Security Gap
    - ◆ Correcting findings brings value to the business

# Step 5. Communicating

# Some points to remember

- ◆ You will be collecting and reviewing an enormous amount of data
  - ◆ This will take time, normally between 3-6 months
- ◆ Leverage your “Human Network”
  - ◆ Use your team, your peers, and stakeholders
  - ◆ Don’t be afraid to ask for help
- ◆ Share your information
  - ◆ Visibility is crucial for your Team and Security Program

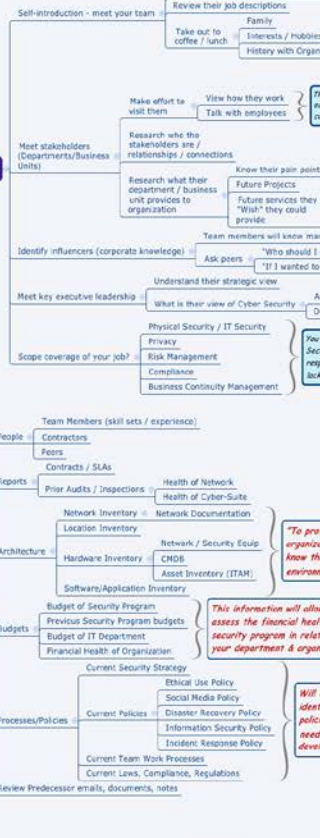

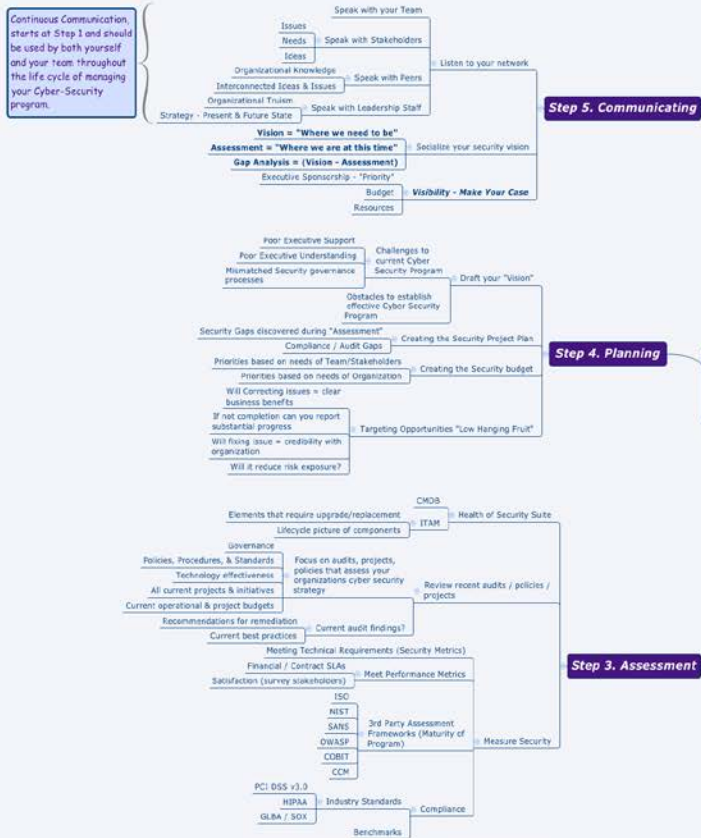

# Conclusion

- ◆ At the end of this 3-6 month journey, you will have:
  - ◆ A “Human Network” to help you drive Cyber in your organization
  - ◆ An updated Inventory of your Organizations Enterprise IT assets
  - ◆ You will know the maturity of your Security Program and your assessment baseline
  - ◆ You will have created your Strategic Security Project Plan
  - ◆ This plan will help you create your Security Program budget
  - ◆ Better understanding of how “Cyber = Business Value”
- ◆ So did you miss anything?
- ◆ When You get home, what are you going to verify?

Continuous Communication starts at Step 1 and should be used by both yourself and your team throughout the life cycle of managing your Cyber-Security program.

This is your team, you will lead and mentor them. You need to understand their strengths and weaknesses, provide training and constructive feedback when needed and working together you will excel. Remember they will look to you for your vision of how you want to implement Security, with that said be open to ideas and be willing to make changes. They have a history with the organization and may have information that can make your transition easier. Just remember: it is on you to make the final decisions and move forward, so get to work!

They are proud of what they do, you want to make an effort and learn about them, This will educate you on your users and how they use data to provide services to your organization's customers.

Getting to know them helps you build the relationships you need to grow your security program and provide services to your customers - the departments. You will find that many of their issues may be related to security gaps that you identify during the assessment step. Listen to them, learn from them, partner with them & grow as a CISO.

You need to understand the breadth of your Security Program. You need to know what your responsibilities are and what authority you have or lack there of.

'To protect the organization, you must know the enterprise IT environment'

This information will allow you to assess the financial health of your security program in relation to your department & organization

Will enable you to identify standing policies & ones that need to be developed

SESSION ID: SEM-M02

## Are You Fighting the Wrong Battles?

**Bill Burns**

---

VP, CISO  
Informatica Corp.

@x509v3 | [Bill.Burns@informatica.com](mailto:Bill.Burns@informatica.com)

# CHANGE

Challenge today's security thinking

# My Background

- ◆ Current: VP, CISO @ Informatica
  - ◆ New ISO27k security/compliance program, new security product line, culture of security
- ◆ My previous lives:

- ◆ Investing in InfoSec – Building VC Security Investment Thesis
- ◆ Democratizing Trusted Cloud Security – AWS CloudHSM
- ◆ Architecting, Building and Operating Security @ Scale

# Why Are We Here?

- ◆ Who are you fighting for?
  - ◆ Shareholders, Owners
  - ◆ Employees, Teammates
  - ◆ Customers, Constituents
- ◆ Why do you do this job?!?
  - ◆ The Challenge, A Puzzle
  - ◆ Protecting Others
  - ◆ Sense of Duty, What's Right

# As A Security Leader, You Are Fighting for

- ◆ Corporate Budget
- ◆ Skilled Resources
- ◆ Employees' Attention
- ◆ Raising The Security Bar On Your Watch
- ◆ Improving The Security State Of The Art

*... Relevance*

# Frames of Reference — Being Relevant

1. **Risk** vs. Threats
2. **Data** vs. Opinion
3. **Relationships** vs. Transactions
4. **Business Impact** vs. Business Disruption
5. **Systems** vs. Tasks
6. **Security** vs. Compliance
7. **Value** vs. Cost
8. **Efficiency** vs. Effort
9. **Results** vs. Effort
10. **Being Heard** vs. Talking
11. **Feedback loops**

# Risk vs. Threats

- ◆ Risk  $\sim$  Vulnerabilities \* Threats \* Impact
- ◆ You do not control **threats**
  - ◆ What the attackers could do
- ◆ You do have (some) control over **impact, vulnerabilities:**
  - ◆ Patching effectively
  - ◆ Incident response capability
  - ◆ Regular response plan testing
- ◆ **Focus on what you can control, being prepared**
  - ◆ Helps your program be seen as Being Proactive vs. Reactive

# Data vs. Opinion

- ◆ Ask yourself: “Who has better data about this situation?”
  - ◆ Have fact-based conversations
    1. Establish hypotheses
    2. Run experiments to gather data (“A/B Tests”)
    3. Measure results
    4. Prove / Disprove your theories
    5. Make decisions to improve security
    6. Rinse, repeat

# Relationships vs. Transactions

- ◆ Move beyond transaction-based personal interactions
- ◆ Industry and Peer benchmarks are powerful leverage
  - ◆ Establishes a neutral or trusted third-party, external expertise
  - ◆ Removes emotion, subjectivity
  - ◆ Ponemon, Gartner, Forrester, WiseGate, peers, etc
- ◆ Build & Maintain Relationships ... With Your Security Peers
  - ◆ Salaries, Budgets, Product Reviews, Training, Feedback, Sanity :)
- ◆ ... With Your Company's Peers
  - ◆ Pre-wiring meetings, Your Program's Support, Their Program's Support

# Business *Impact* vs. Business *Disruption*

- ◆ Business Disruption:
  - ◆ Applying OS patches typically requires reboots
  - ◆ Critical infrastructure patches lowers availability
  - ◆ Pay down technical debt means we can't ship the new features
- ◆ Business Impact:
  - ◆ Compare security posture, features to your peers, industry benchmarks
  - ◆ Security can be a competitive differentiator, or a “must do”, not a tax
  - ◆ Use events like “What if we had the same thing happen to us...?”
  - ◆ Speak to the business impact, not the technical details
  - ◆ Get this on record, have this conversation, build your case

# Systems & Programs vs. Tasks

- ◆ We know security is an ongoing process, not a task or one-time checklist
- ◆ Task-focused security appears never-ending
  - ◆ Hard to show return on investment, results for effort
  - ◆ Minutiae obscures the value of security from project-level work
- ◆ Focus on higher-level metrics, regular cadence, objectives, accountability
- ◆ Build repeatable processes, automation, Programs
- ◆ Focus on what you can control
- ◆ Follow program management guidelines, best practices
  - ◆ Charter, Goals, Sponsorship, Metrics, Review, Cadence, RACI

# Systems & Programs vs. Tasks (II)

- ◆ Example: Patching, Vulnerability Management is hard work. Never “done”.
  - ◆ Filing individual vulnerabilities & issues is not sustainable
  - ◆ Pre-wire conversations ahead of review meetings to re-affirm expectations, address concerns
  - ◆ Establish regular cadence with stakeholders to build accountability, credibility, measure progress
  - ◆ Prioritize the risk of what’s discovered, enabled
- ◆ Measure efficacy and efficiency, not effort
  - ◆ Move beyond “numbers of criticals”
  - ◆ Report “time to close” critical vulnerabilities
  - ◆ Not “100% patched”, but “close critical vulns within 2 days of release”
- ◆ Goal: Sustainable Security Programs

# Security vs. Compliance

- ◆ Focus on solid security foundations
- ◆ Compliance will come along for the ride
  - ◆ “Say It” – Policies
  - ◆ “Do It” – Procedures & Guidelines
  - ◆ “Prove It” – Generate evidence to review
- ◆ Many standards, pick the best match for your company
- ◆ Already started with Compliance? Expand into Good Security

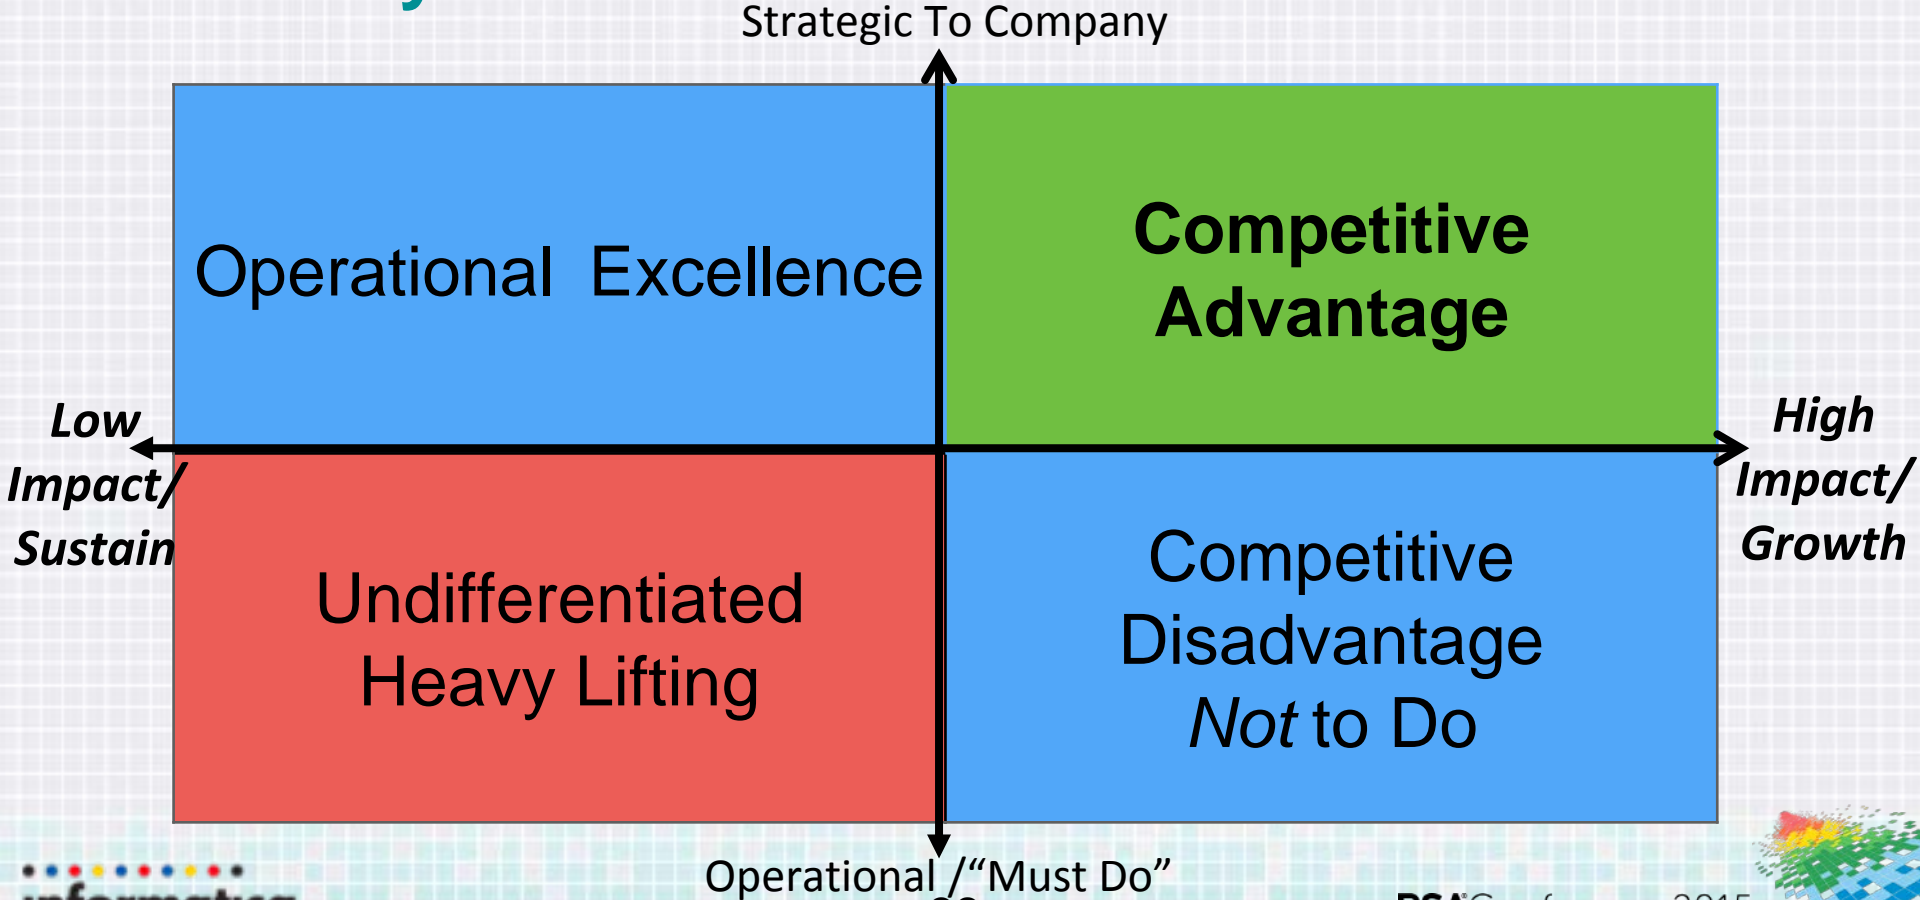

# Assess once, comply many

Controls:	ISO 27000	SOX	GLBA	HIPAA	US-EU Data Privacy
Security Policy	✓	✓	✓	✓	✓
Organization of InfoSec	✓	✓	✓	✓	✓
Human Resource Security	✓			✓	✓
Asset Management	✓				
Access Control	✓	✓	✓	✓	✓
Cryptography	✓			✓	✓
Physical & Environmental	✓	✓		✓	✓
Operations Security	✓	✓		✓	✓
Communications Security	✓	✓	✓	✓	✓
System Acq, Dev & Maint	✓	✓	✓	✓	✓
Supplier Relationships	✓	✓	✓	✓	✓
InfoSec Incident Management	✓		✓	✓	✓
Business Continuity	✓	✓	✓	✓	
Compliance	✓	✓	✓	✓	✓

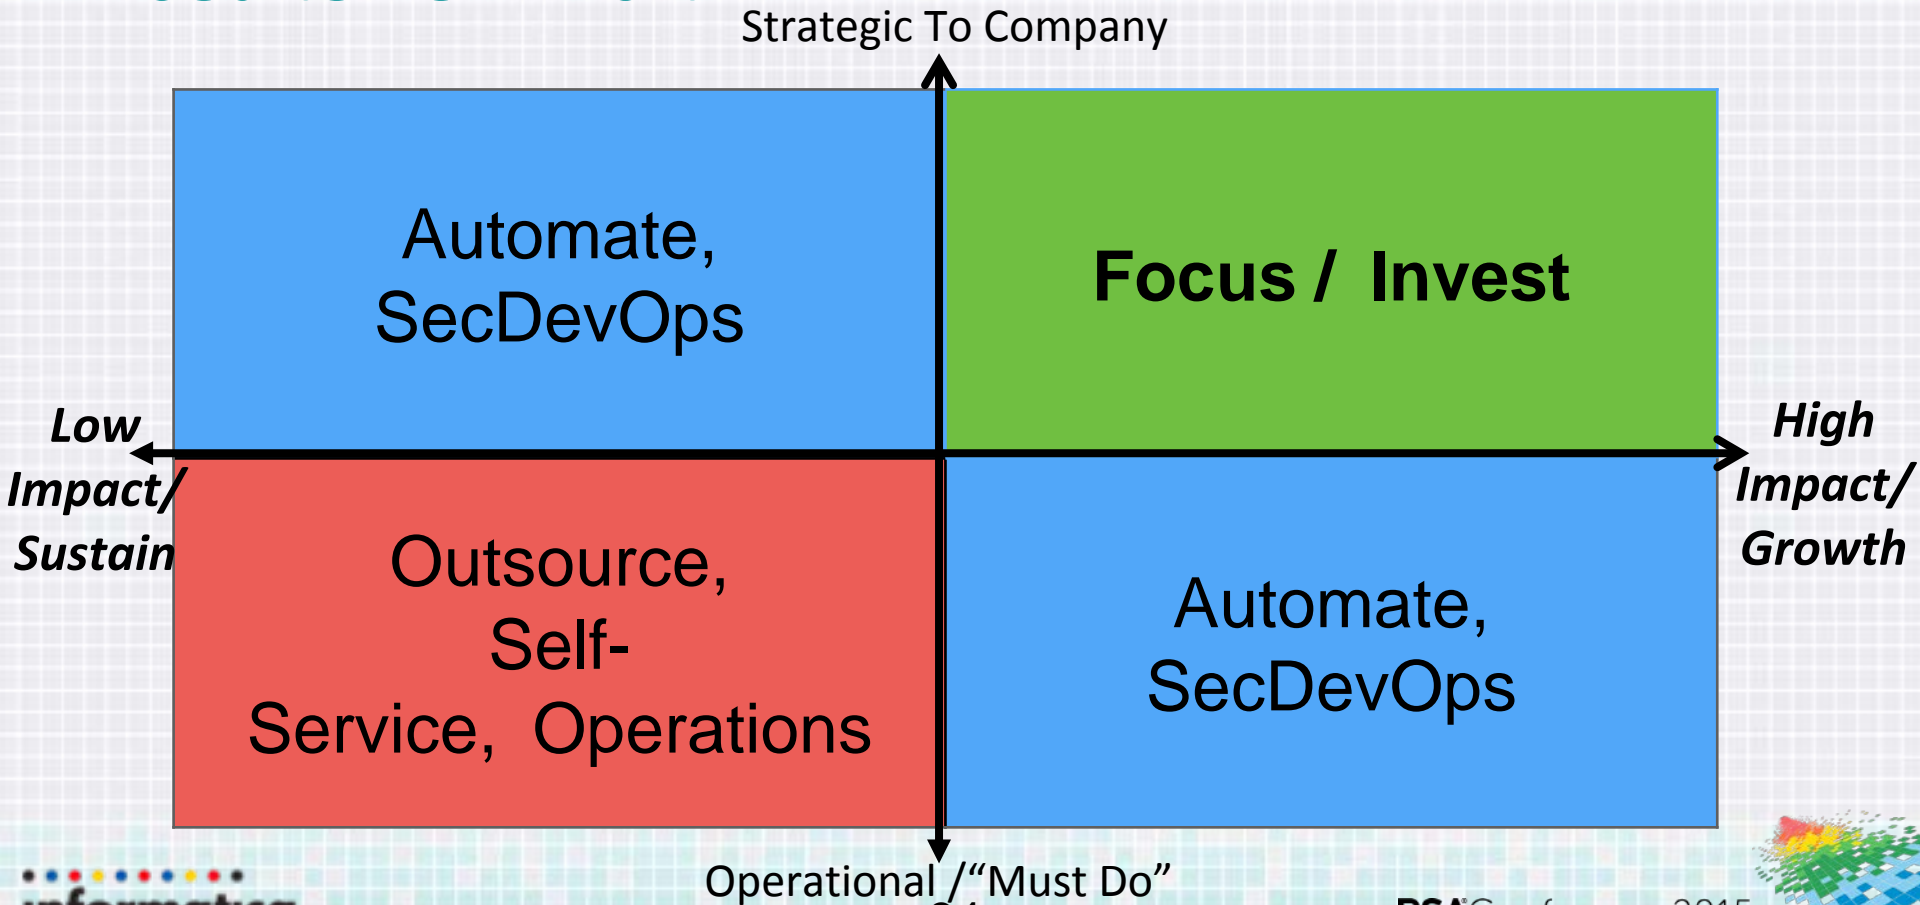

# Efficiency vs. Effort

# Results vs. Effort

# Communicating vs. Talking

- ◆ Security is about influencing, selling, advising
- ◆ Communications is what The *Receiver Does*
- ◆ To be heard, use *their* vocabulary
- ◆ To be effective, use *their* communications vehicle
  - ◆ Avoid “Impedance Mismatches”
  - ◆ Operations: Change Requests & Tickets
  - ◆ Engineering: Bug Reports, Feature Requests
  - ◆ Automate filing audit tasks via your ticketing system
  - ◆ Create User Stories for desired security features

# Feedback Loops

- ◆ Putting it all together ...
- ◆ Create tight feedback loops with your stakeholders
  - ◆ Builds relationships, trust
  - ◆ Require metrics, measuring the Right Things
  - ◆ Establish data-based decision making
  - ◆ Reinforce / disprove your hypotheses
  - ◆ Increase your security velocity
  - ◆ This encourages Results, incremental improvements

# RSA<sup>®</sup>Conference2015

San Francisco | April 20-24 | Moscone Center

## Recap

# It's All About Results. Do The Following:

- ◆ By Next Week
  - ◆ Time map: Evaluate where [you | your team] is spending its energy
  - ◆ Take your [CIO | Operations Peer | Engineer Peer ] to lunch
- ◆ With Next Quarter
  - ◆ Assess what metrics are truly impactful. Eliminate the rest.
  - ◆ For a month, measure your time-to-remediate vulns on one critical system or subnet
  - ◆ Identify 3 repeatable tasks you can automate
- ◆ By the End of This Year
  - ◆ Take your [General Council | Chief Product Officer | etc] to lunch. Share top metrics.
  - ◆ Automate at least 2 repeatable audit or security tasks
  - ◆ Create 1+ feedback loop on a task with your Operations or Engineer peer

# Information Security Leadership: Surviving as a Security Leader

## Being a CISO – What They Don't Tell You

**Evan Wheeler - Moderator**

**Amy Butler**

George Washington University

**Jack Jones**

CXOWARE

**Julie Fitton**

EMC Rubicon Cloud Services

**Rick Howard**

Palo Alto Networks

# CHANGE

Challenge today's security thinking

# Architect?

# Police?

# Everything

# Lawyer?

# Politician?

# Apply Slide

- ◆ Develop your team's culture to match the business, not as a sub-culture of security
- ◆ Should set aside time for strategic planning
- ◆ To be successful, you must be able to keep people calm, shield your team from pressures, and handle the stress yourself
- ◆ Developing and maintaining strong peer networks is key
- ◆ You must get comfortable “living in the grey”
- ◆ Educate yourself about the business

SESSION ID: SEM-M02

## Stepping Inside the Boardroom

**Trey Ford**

Global Security Strategist

@Rapid7

@treyford

# CHANGE

Challenge today's security thinking

# Agenda

- ◆ Introductions
- ◆ Boardroom Disciplines
- ◆ The Security Executive's Challenges
- ◆ The Obvious Questions
- ◆ Affecting Change – Rapid7 Research Project

# Introductions - Me

- ◆ Trey Ford, Global Security Strategist
  - ◆ Industry Advocate, Community Outreach, Spokesperson at Rapid7
  - ◆ Former GM at Black Hat, IR at Zynga, PM at McAfee, WhiteHat Security
  - ◆ Earned a gold star on a science project

# Introductions - You

- ◆ What generation CISO are you?
- ◆ Board Presentations – have you given one?
- ◆ What kind of board are you preparing for?

# RSA<sup>®</sup>Conference2015

San Francisco | April 20-24 | Moscone Center

## Boardroom Disciplines

 #RSAC

# Established Professions

- ◆ Medicine
- ◆ Law
- ◆ Engineering
- ◆ Accounting

# Boardroom Technology

NCR – 1884

IBM - 1911

# RSA®Conference2015

San Francisco | April 20-24 | Moscone Center

## The Security Executive's Challenges

## Information Security

No Real 'How To' Guide

# Security Status Report

- ◆ Accounting has their GAAP
- ◆ Legal and Medicine has theirs
- ◆ What about Information Security?

# Communication Flow

WISDOM

SUMMARIES

KNOWLEDGE

INFORMATION

DATA

Data, Verbose Reports

# Curse of Knowledge

- ◆ **Uncertainty at the Top**
  - ◆ Executives are Comfortable
  - ◆ Engineers are NOT Comfortable
- ◆ **The Secret**
  - ◆ Helping inform a point of view
  - ◆ The idea may be right or wrong

## Vulnerability & External Audit Reports

**BURY THEM!?!?!**

# Incidents Happen

- ◆ Unsafe to Discuss?
- ◆ Acknowledge bias:
  - ◆ Prevention vs. Response

# Activating Incident Response

- ◆ Admitting Failure?
- ◆ Insurance Policy?

# RSA<sup>®</sup>Conference2015

San Francisco | April 20-24 | Moscone Center

## Asking the Obvious Questions

# Obvious Questions

- ◆ Executive interactions must always answer:
  - ◆ What do I need to know?
  - ◆ Why does it matter? / What do I care?
  - ◆ What do you need from me?
  
- ◆ This is both SIMPLE and HARD!

# Obvious Questions – know your audience

- ◆ Are you the first “CISO” to present?
- ◆ Who are you presenting to?
  - ◆ For how long?
  - ◆ How often?
- ◆ How are the CIO/CFO/GC incentivized?

# Obvious Questions – soul searching

## Discussing

- ◆ Unknowns
- ◆ Vulnerabilities
- ◆ Incidents

suicide or demonstration of strength?

# RSA<sup>®</sup>Conference2015

San Francisco | April 20-24 | Moscone Center

## Affecting Change: Rapid7's Research Project

# Affecting Change: Expanding the Survey

- ◆ A Quantitative and Qualitative Survey
- ◆ Need > 250 CISOs and Non-Security Executives
- ◆ Takes less than 15 minutes of someone's time
- ◆ Results in an open source “Playbook” for CISOs
  - ◆ What should be reported? (Routine vs Special Requests)
  - ◆ Mapping to Common Security Frameworks

# Affecting Change: Take it Yourself / Contribute

- ◆ Please take 15 minutes to complete the survey TODAY

**[bit.ly/CISOSurvey2015](https://bit.ly/CISOSurvey2015)**

- ◆ Then, pass it along:
  - ◆ 2 security colleagues
  - ◆ 3 non-security colleagues!

# How to Apply What You've Learned

- ◆ Today you should:
  - ◆ Take Rapid7's CISO Reporting Survey
- ◆ In the next two weeks:
  - ◆ Evaluate what your teams are reporting
  - ◆ Think about how non-security executives will consume the results
  - ◆ Modify your metrics and report to focus more on business risk
- ◆ In the next 3 months:
  - ◆ Contact the consumers of your updated reports
  - ◆ Ask for feedback vs. previous months / years
