

The image shows the Beijing National Aquatics Center, also known as the Water Cube, at night. The building's iconic facade is a complex, interconnected network of white, tubular structures that resemble a water molecule. It is illuminated from within, casting a warm yellow glow. The lower levels of the building are lit with a vibrant red light. In the foreground, a paved plaza is filled with people, some walking and others standing. The plaza is decorated with small, round, ground-level lights and blue light trails. There are also some trees and a blue umbrella visible on the left side.

Web  
Applications**

# Iowa Example

```
class Main < Iowa::Component
  attr_accessor :person

  def all_people
    Person.fetch_all()
  end

  def delete_person
    Person.delete(@person)
  end
end
```

# Iowa Example (cont'd)

```
<ul oid="people">
  <li>@person.firstName @person.lastName
    <a oid="delete_person">delete</a></li>
</ul>
```

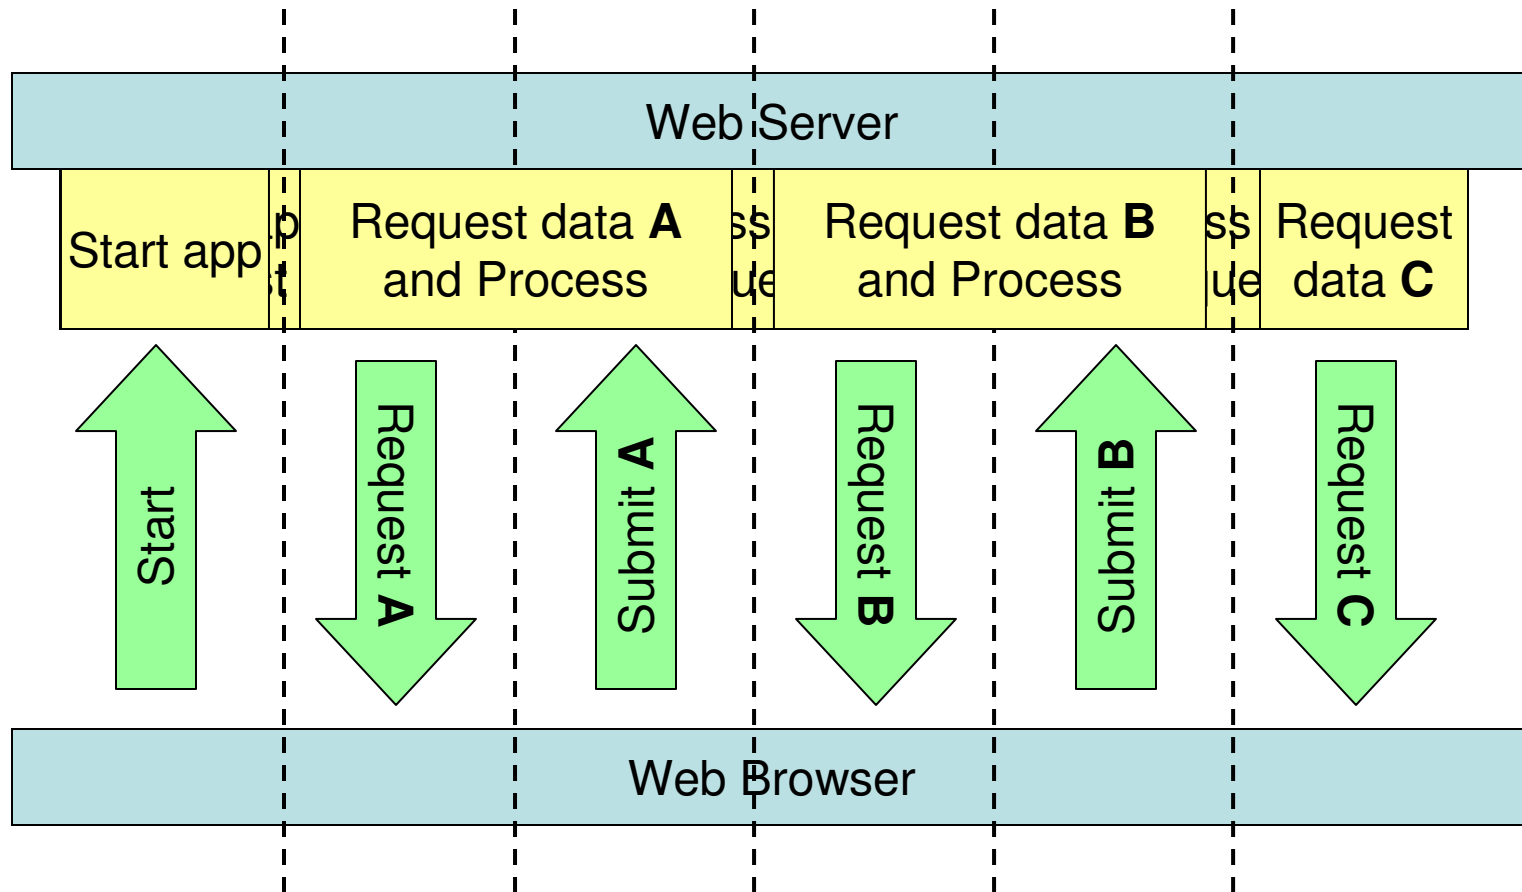

```
<?
  people {
    item = person
    list = all_people
  }
?>
```

# Synchronous Development: inverting the request/response loop

# Seaside 0.9: Example

```
html
```

```
^ |
```

```
<ul sea:id="people">
```

```
  <li>[person.firstName] [person.lastName]
```

```
    <a sea:id="delete:">delete</a></li>
```

```
</ul>
```

```
|
```

# Example (cont'd)

```
addBindingsTo: template
```

```
(template elementNamed: 'people')
```

```
  bind: #list toPath: 'allPeople';
```

```
  set: #iterator to: #person.
```

```
(template elementNamed: 'delete:')
```

```
  bind: #argument toPath: 'person'.
```

# Example (no bindings)

```
html
```

```
^ |
```

```
<ul sea:id="person/allPeople">
```

```
  <li>[person.firstName] [person.lastName]
```

```
    <a sea:id="delete:">delete</a></li>
```

```
</ul>
```

```
|
```

# Example (conditionals, embedding)

```
html
```

```
^ |
```

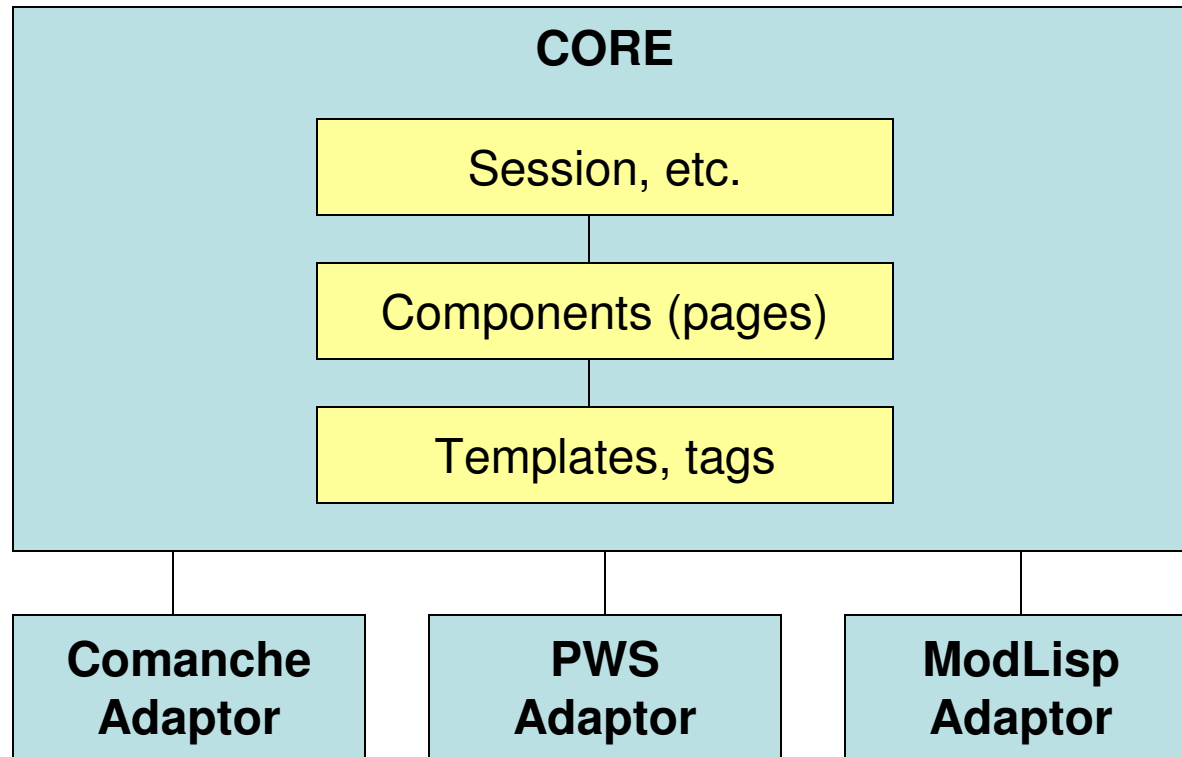

```
<if sea:id="allPeople.isEmptyOrNull.not">  
  Number of people: [allPeople.size]  
</if>'
```

```
html
```

```
^ |
```

```
<form sea:id="save">  
  <input sea:id="firstName" />  
  <IADateSelector sea:id="birthday" />  
</form>'
```

# Seaside 0.9: Architecture

# Seaside 2.x – Borges

~~Templates~~

Layers

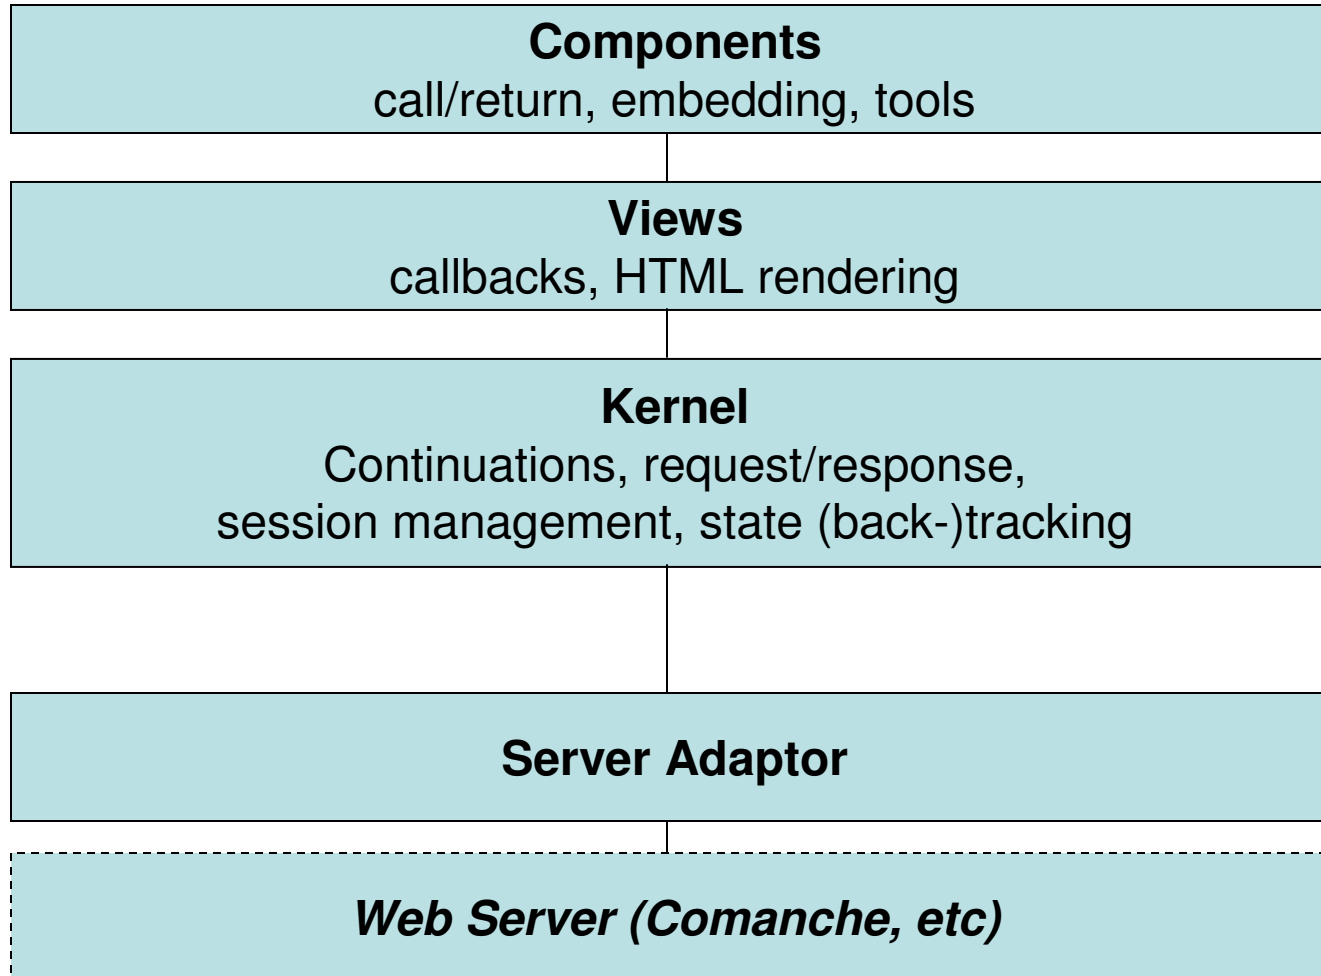

~~Magic~~

In all fiction, when a man is faced with alternatives he chooses one at the expense of the others. In the almost unfathomable Ts'ui Pen, he chooses - simultaneously - all of them. He thus creates various futures, various times which start others that will in turn branch out and bifurcate in other times...

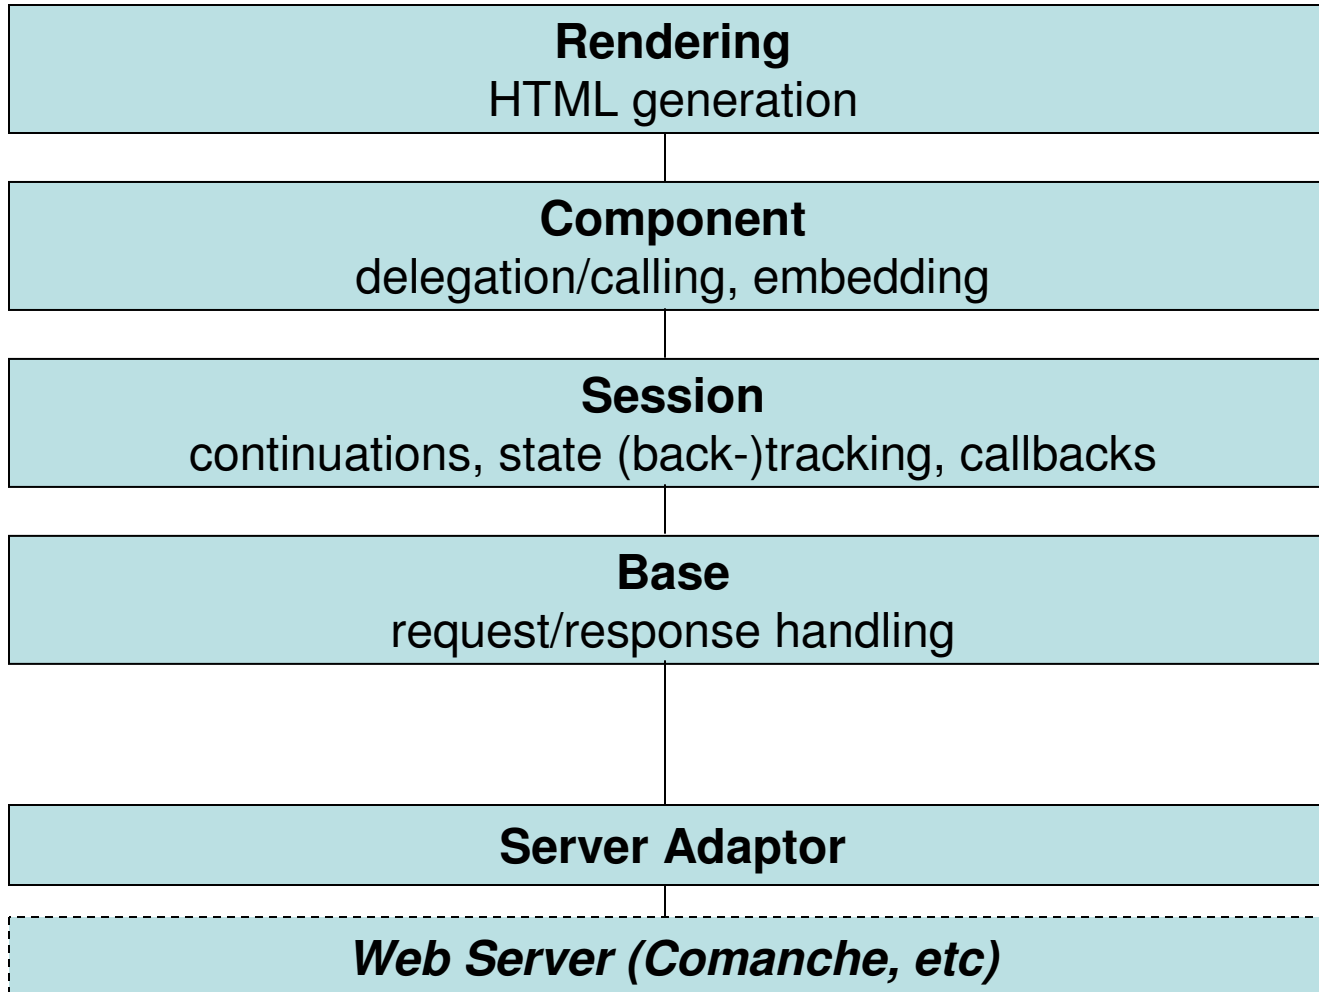

- Jorge Luis Borges, *The Garden of Forking Paths*

# Seaside 2.0: Architecture

# Seaside 2.3: Architecture

# Stabilization

The background of the slide is a dark, monochromatic photograph of the Bird's Nest stadium in Beijing. The stadium's intricate, lattice-like structure is illuminated from within, creating a glowing pattern against the dark night sky. The foreground shows a dark, paved plaza with a grid pattern of tiles.

# Seaside 2.9: Architecture

# The Metaphor

- main() { *WARenderLoopMain*
- root = new\_root\_component();
- while (1) { *WARenderLoop*
- render(root); *WARenderContinuation*
- process\_callbacks(root);
- redirect(); *WARedirectContinuation*
- }
- }

# Plugging In: Some Ideas

- Configuration
- Error Handler
- Request Handler
- Session Expiry Handler
- Toolbar or Halo plugin
- ... ?

# Example: Configuration

- Subclass `WASystemConfiguration`
- Implement `#describeOn:`
- *(optional)* Implement `#parents`
- Add the configuration to your application
  
- *Note: attribute names need to be unique so prefix yours appropriately to avoid collisions*

# Example: Configuration

```
describeOn: config
```

```
(config string: #myappSoapHost)
```

```
  label: 'SOAP Host';
```

```
  comment: 'My App SOAP server hostname'.
```

```
(config list: #myappTheme)
```

```
  label: 'Theme';
```

```
  options: [self allThemes].
```

```
config at: #sessionClass put: MySession.
```

# Example: Error Handler

- Subclass `WSErrorHandler`
- Implement `#handleError:`
- *(optional)* Implement `#handleWarning:` and `#internalError:`
- Select the error handler in your application's configuration

# Example: Error Handler

```
handleError: anError
```

```
session := WACurrentRequestContext session.
```

```
self
```

```
    sendEmailForSession: session
```

```
    error: anError.
```

```
self forkAndSaveForDebugging.
```

# Example: Request Handler

- Subclass WAEntryPoint
- Implement #handleRequest:
- *(optional)* Implement your own Configuration and add it as a parent in #defaultConfiguration
- Add an instance of your class to a dispatcher

# Example: Session Expiry Handler

- Subclass `WAEExpiredSessionKeyHandler`
- Implement `#handleRequest:` to return a response
- Configure your application to use your new handler

A photograph of the Watercube building at night, illuminated with blue and pink lights. The building's facade is composed of many irregular, hexagonal panels that glow with light. In the foreground, a large crowd of people is gathered on a paved plaza, some looking towards the building. The sky is dark, and the overall atmosphere is vibrant and modern.

Questions?

Julian Fitzell – [julian@fitzell.ca](mailto:julian@fitzell.ca)

# Seaside 2.9 (a peek)

- Split into modules
- Configuration system refactoring
- First class mime types and locales
- Cryptographically secure session and continuation keys
- RequestContext
- Painter/Presenter refactoring (?)
