CHAPTER 1

# Challenge 0 - Solution

Using the Zinc HTTP library available by default in Pharo, get the pharo logo from http://pharo.org/files/pharo.png. Convert it into a morph and open it in Pharo. You should obtain something similar than the picture below.

### Hints:

- The class `ZnEasy` offers several handy messages to ease HTTP requests.
- The message `asMorph` converts low level graphical elements (form) into Morph (graphical objects).
- The message `openInWorld` open graphical objects.

### Solution

```
newLogo := (ZnEasy getPng: 'http://pharo.org/files/pharo.png')
    asMorph openInWorld
```

To remove this new logo:

```
World removeMorph: newLogo
```
