

Getting things done with Zabbix services

Alexander Sergunin
Sales Manager

The Intro

What's there to talk about?

\$ervices, duh!

Fine, there will be real use-cases as well

Services

Take your pick:

- Tech support
- Development
- Consulting
- Upgrades
- Training
- etc

Services

In other words, what can we do

- Deploy/tune
- Migrate (wink-wink)
- Support
- Expand your services

The Premise

You - service provider / integrator

Customer – decides to move to Zabbix completely...like now

The Problem

- Lack of Zabbix expertise
- Lack of available resources

Let us bite the bullet for you!

The Example

- Your customer is only half way through with the requirements.
- Some equipment is not even shipped yet.
- Deadlines are closing in fast.

The Example

Easy, right?

Have some more obstacles:

- Connection – 800x600 teamviewer window.
- Sleep mode?!
- Slow internet and end user response rate.

The Outcome

CHALLENGE ACCEPTED

- Zabbix deployed!
- Custom SNMP templates.
- Integration.
- Documentation and more.

Support

That's nice and all, we just want maintenance. How does that work?

- JIRA (secure portal)
- Email, phone, remote sessions, onsite visits

The Statement

Response time *GUARANTEED*

The Truth

We too use Zabbix!

APPLAUSE

The Work Flow

The Benefits

- Quality services upon request
- Detailed documentation of a job well done
- Piece of mind
- Support the product
- Be a part of an awesome community

The People

YOU!

The Options

How to get started:

- Request a demo.
- Attend webinars.
- Download the software.
- Buy our services.
